

Video urodynamics (VUD) if your child is on medication

Your child is booked to come to the hospital to have a VUD test. This is an x-ray test of the bladder to show how it is functioning.

If your child takes any of the medicines listed below it is important that they stop taking them two weeks before coming into hospital. If they do not do this, the test may need to be cancelled.

Oxybutynin (Cystrin, Ditropan) or Oxybututynin slow release (Lyrinel XL)

Tolterodine (Detrusitol) or Tolterodine slow release (Detrusitol XL)

Solifenacin

You do not have to stop any other medication.

If you have any questions or concerns please contact paediatric urology specialist nurses:

Tel: 023 8120 6344

Email: amelia.denny@uhs.nhs.uk or nicola.winter@uhs.nhs.uk
