Haematuria

1. Mishriki S F, Aboumarzouk O, Somani B K.
   Hematuria under 40 years: Who needs investigations? Long prospective large-cohort study. 
   *European Association of Urology meeting*, 2014 P222, 632.

   Routine urine cytology has no role in haematuria investigations. 

   Half the visible and half the recurrent visible haematuria have underlying pathology: 
   Prospective large cohort study with long-term follow-up. 

   Visible haematuria in patients under 40 years – Prospective study with 3-11 years follow-up. 

   What is the natural history of frank haematuria? Prospective large cohort study with long-term follow-up. 

   Is smoking associated with higher stage and grade bladder cancer? Prospective long-term follow-up study. 

7. Mishriki SF, Somani BK, Vint R, Lam T.
   Dipstick haematuria: Prospective outcome of 974 patients. 

   Is urine cytology a relevant investigation for urological malignancies? 

   Post-Embolization Syndrome (PES) following renal angioembolisation: Does underlying disease matter? 
   *European Urology* 2005(March); 4(3): 189.
