Chemotherapy Protocol

LYMPHOMA

CARBOPLATIN-ETOPOSIDE-IFOSFAMIDE-RITUXIMAB

(RICE)

Inpatient Regimen

Regimen

- Lymphoma – InP-RICE-Carboplatin-Etoposide-Ifosfamide-Rituximab

Indication

- Non Hodgkin’s Lymphoma that is CD20 positive

Toxicity

<table>
<thead>
<tr>
<th>Drug</th>
<th>Adverse Effect</th>
</tr>
</thead>
<tbody>
<tr>
<td>Carboplatin</td>
<td>Neuropathy, nephrotoxicity, ototoxicity</td>
</tr>
<tr>
<td>Etoposide</td>
<td>Hypotension on rapid infusion, hyperbilirubinaemia</td>
</tr>
<tr>
<td>Ifosfamide</td>
<td>Haemorrhagic cystitis, encephalopathy, nephrotoxicity</td>
</tr>
<tr>
<td>Rituximab</td>
<td>Severe cytokine release syndrome, increased incidence of infective complications, progressive multifocal leukoencephalopathy</td>
</tr>
</tbody>
</table>

The adverse effects listed are not exhaustive. Please refer to the relevant Summary of Product Characteristics for full details.

Monitoring

Drugs

- FBC, LFTs (including albumin) and U&Es prior to day one of treatment
- EDTA or calculated creatinine clearance prior to each cycle
- Urine dip test for protein every four hours the day of and the day after ifosfamide administration
- Fluid balance monitoring every four hours the day of and the day after ifosfamide administration. Urine output should be maintained above 100ml/hour
- Check hepatitis B status before starting treatment with rituximab

Dose Modifications

The dose modifications listed are for haematological, liver and renal function and drug specific toxicities only. Dose adjustments may be necessary for other toxicities as well.
In principle all dose reductions due to adverse drug reactions should not be re-escalated in subsequent cycles without consultant approval. It is also a general rule for chemotherapy that if a third dose reduction is necessary treatment should be stopped.

Please discuss all dose reductions / delays with the relevant consultant before prescribing, if appropriate. The approach may be different depending on the clinical circumstances.

**Haematological**

There are no dose modifications for haematological toxicity. Treatment should be delayed until the minimum criteria, described in the table below, are reached.

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Eligible Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Neutrophil</td>
<td>equal to or more than 1x10^9/L</td>
</tr>
<tr>
<td>Platelets</td>
<td>equal to or more than 50x10^9/L</td>
</tr>
</tbody>
</table>

Consider blood transfusion if the patient is symptomatic of anaemia or has a haemoglobin of less than 8g/dL.

**Hepatic Impairment**

Please note that the approach may be different if abnormal liver function tests are due to disease involvement.

Other

Dose reductions or interruptions in therapy are not necessary for those toxicities that are considered unlikely to be serious or life threatening. For example, alopecia, altered taste or nail changes.

Etoposide

Where significant reductions in albumin levels occur consider reducing the dose of etoposide.

Ifosfamide

In the case of a NCI-CTC grade 1 neurological toxicity, the dose of ifosfamide may be reduced for the next cycle. If a NCI-CTC grade 2 neurological toxicity appears or neurological toxicity worsens despite dose reduction, the ifosfamide should be stopped.

Risk factors for CNS toxicity include a low albumin, renal impairment, prior administration of cisplatin, poor performance status, CNS tumour, bulky pelvic disease, concomitant psychotropic drugs and younger age. Methylene blue 50mg four times a day intravenous infusion in 100ml sodium chloride 0.9% over 30 minutes can be used to prevent or treat ifosfamide induced encephalopathy.

Rituximab

Infusion related adverse reactions have been observed in 10% of patients treated with rituximab.

Rituximab administration is associated with the onset of cytokine release syndrome. This condition is characterised by severe dyspnoea, often accompanied by bronchospasm and hypoxia, in addition to fever, chills, rigo, urticaria, and angioedema. It may be associated with some features of tumour lysis syndrome such as hyperuricaemia, hyperkalaemia, hypocalcaemia, acute renal failure, elevated lactate dehydrogenase (LDH) and can lead to...
acute respiratory failure and death. This effect on the lungs may be accompanied by events such as pulmonary interstitial infiltration or oedema, visible on a chest x-ray.

Cytokine release syndrome frequently occurs within one or two hours of initiating the first infusion.

Hypersensitivity reactions, including anaphylaxis, have been reported following the intravenous administration of proteins. In contrast to cytokine release syndrome, true hypersensitivity reactions typically occur within minutes of starting the infusion. Medicinal products for the treatment of allergic reactions should be available for immediate use in the event of hypersensitivity developing during the administration of rituximab.

Use of rituximab maybe associated with an increased risk of progressive multifocal leukoencephalopathy (PML). Patients must be monitored at regular intervals for any new or worsening neurological, cognitive or psychiatric symptoms that may be suggestive of PML. If PML is suspected, further dosing must be suspended until PML has been excluded. If PML is confirmed the rituximab must be permanently discontinued.

The presence of a viral upper respiratory tract infection prior to treatment may increase the risk of rituximab associated hepatotoxicity. Patients should be assessed for any cold or flu like symptoms prior to treatment.

Regimen

3 cycles (1 cycle will be set in Aria)

Please note in the original CORAL study1 an additional dose of rituximab 375mg/m² was given on day -2, cycle 1 only. This does not appear in Aria but can be added manually at the clinician’s discretion.

</tbody>
</table>

New cycles begin on the day that the neutrophil count recovers to more than 1x10⁹/L and the unsupported platelet count is more than 50x10⁹/L.
Dose Information

- Carboplatin will be rounded to the nearest 50mg (up if halfway)
- The maximum dose of carboplatin is 800mg
- Etoposide will be dose banded according to the agreed bands
- Ifosfamide will be dose banded according to the agreed bands
- Mesna will be dose banded according to the agreed bands
- Rituximab dose will be rounded to the nearest 100mg (up if halfway)

Administration Information

Extravasation

- Carboplatin - irritant
- Etoposide – irritant
- Ifosfamide – neutral
- Mesna – neutral
- Rituximab – neutral

Other

- The rate of administration of rituximab varies. Please refer to the rituximab administration guidelines

Additional Therapy

This is an inpatient regimen please ensure all supportive and take home medicines are prescribed on the inpatient chart or general electronic prescribing system.

- Rituximab premedication
  
  30 minutes prior to rituximab
  
  - chlorphenamine 10mg intravenous
  - hydrocortisone 100mg intravenous
  - paracetamol 1000mg oral

- Rituximab infusion reactions
  
  - hydrocortisone 100mg intravenous when required for rituximab infusion related reactions
  - salbutamol 2.5mg nebul when required for rituximab related bronchospasm
  - consider pethidine 25-50mg intravenous for rituximab related rigors that fail to respond to corticosteroids.
• **Antiemetics**
  
  Starting 15-30 minutes prior to chemotherapy
  
  - dexamethasone 4mg twice a day for 5 days starting oral or intravenous
  - metoclopramide 10mg three times a day when required oral or intravenous
  - ondansetron 8mg twice a day for 5 days oral or intravenous

• **Growth factors continued until the neutrophil count is above 1x10^9/L. For example:**
  
  - filgrastim or bioequivalent 30 million units once a day from day 6 subcutaneous
  - lenograstim or bioequivalent 33.6 million units once a day from day 6 subcutaneous
  - pegfilgrastim or bioequivalent 6mg once only on day 4 subcutaneous

• **Mouthwashes according to local or national policy on the treatment of mucositis**

• **Gastric protection with a proton pump inhibitor or a H₂ antagonist may be considered in patients considered at high risk of GI ulceration or bleed.**

• **In female patients consider norethisterone 5mg three times a day oral to delay menstruation**

• **Allopurinol 300mg once a day for the first cycle only**

• **Anti-infective prophylaxis as follows:**
  
  - aciclovir 400mg twice a day oral
  - co-trimoxazole 960mg once a day on Monday, Wednesday and Friday only oral

**Coding**

• **Procurement – X71.5**

• **Delivery – Not Required**

REGIMEN SUMMARY

InP-RICE-Ifosfamide-Carboplatin-Etoposide-Rituximab

Other than those listed below, supportive medication for this regimen will not appear in Aria as prescribed agents. The administration instructions for each warning describes the agents which must be prescribed on the in-patient chart / general e-prescribing system.

Day 1

1. Warning – Check supportive medication prescribed
   Administration instructions
   1. Dexamethasone 4mg twice a day, days 1 to 5 oral or intravenous
   2. Metoclopramide 10mg three times a day as required oral or intravenous
   3. Ondansetron 8mg twice a day, days 1 to 5 oral or intravenous
   4. Aciclovir 400mg oral twice a day oral
   5. Co-trimoxazole 960mg once a day on Monday, Wednesday and Friday oral
   6. Growth factor continued until the neutrophil count is above 1x10^9/L, for example:
      - filgrastim or bioequivalent 30 million units once a day from day 6 subcutaneous
      - lenograstim or bioequivalent 33.6 million units once a day from day 6 subcutaneous
      - pegfilgrastim or bioequivalent 6mg once only on day 4 subcutaneous
   7. Allopurinol 300mg once a day oral (cycle one only)
   8. Consider gastric protection
   9. Consider mouthwashes
   10. Consider norethisterone for menstruating women
   11. Consider pethidine 25-50mg intravenous for rituximab related rigors unresponsive to corticosteroids

2. Chlorphenamine 10mg intravenous

3. Hydrocortisone 100mg intravenous injection

4. Paracetamol 1000mg oral

5. Rituximab 375mg/m^2 intravenous infusion in 500ml sodium chloride 0.9% as per the rituximab administration guidelines

6. Etoposide 100mg/m^2 intravenous infusion in 1000ml sodium chloride 0.9% over 60 minutes

7. Hydrocortisone 100mg intravenous once only when required for the relief of rituximab infusion related reactions

8. Salbutamol 2.5mg nebul once only when required for the relief of rituximab related bronchospasm
Day 2

1. **Warning – Check supportive medication prescribed**
   
   Administration instructions
   1. Dexamethasone 4mg twice a day, days 1 to 5 oral or intravenous
   2. Metoclopramide 10mg three times a day as required oral or intravenous
   3. Ondansetron 8mg twice a day, days 1 to 5 oral or intravenous
   4. Aciclovir 400mg oral twice a day oral
   5. Co-trimoxazole 960mg once a day on Monday, Wednesday and Friday oral
   6. Growth factor continued until the neutrophil count is above 1x10^9/L, for example: 
      - filgrastim or bioequivalent 30 million units once a day from day 6 subcutaneous
      - lenograstim or bioequivalent 33.6 million units once a day from day 6 subcutaneous
      - pegfilgrastim or bioequivalent 6mg once only on day 4 subcutaneous
   7. Allopurinol 300mg once a day oral (cycle one only)
   8. Consider gastric protection
   9. Consider mouthwashes
   10. Consider norethisterone for menstruating women
   11. Consider pethidine 25-50mg intravenous for rituximab related rigors unresponsive to corticosteroids

2. **Etoposide 100mg/m^2 intravenous infusion in 1000ml sodium chloride 0.9% over 60 minutes**

3. **Carboplatin AUC 5 (max 800mg) intravenous infusion in 500ml glucose 5% over 60 minutes**

4. **Mesna 1000mg/m^2 intravenous infusion in 100ml sodium chloride 0.9% over 15 minutes**

5. **Ifosfamide 2500mg/m^2 and mesna 2500mg/m^2 intravenous infusion in 1000ml sodium chloride 0.9% over 12 hours**
   
   Administration instructions
   The ifosfamide infusions should be run one after the other. That is, as one infusion ends, the next should begin immediately. The total dose over 24 hours is 5000mg/m^2 ifosfamide and 5000mg/m^2 mesna in a total volume of 2000ml sodium chloride 0.9%.

6. **Ifosfamide 2500mg/m^2 and mesna 2500mg/m^2 intravenous infusion in 1000ml sodium chloride 0.9% over 12 hours**
   
   Administration instructions
   The ifosfamide infusions should be run one after the other. That is, as one infusion ends, the next should begin immediately. The total dose over 24 hours is 5000mg/m^2 ifosfamide and 5000mg/m^2 mesna in a total volume of 2000ml sodium chloride 0.9%.

Day 3

1. **Warning – Check supportive medication prescribed**
   
   Administration instructions
   1. Dexamethasone 4mg twice a day, days 1 to 5 oral or intravenous
   2. Metoclopramide 10mg three times a day as required oral or intravenous
   3. Ondansetron 8mg twice a day, days 1 to 5 oral or intravenous
   4. Aciclovir 400mg oral twice a day oral
   5. Co-trimoxazole 960mg once a day on Monday, Wednesday and Friday oral
   6. Growth factor continued until the neutrophil count is above 1x10^9/L, for example: 
      - filgrastim or bioequivalent 30 million units once a day from day 6 subcutaneous
      - lenograstim or bioequivalent 33.6 million units once a day from day 6 subcutaneous
      - pegfilgrastim or bioequivalent 6mg once only on day 4 subcutaneous
   7. Allopurinol 300mg once a day oral (cycle one only)
   8. Consider gastric protection
   9. Consider mouthwashes
   10. Consider norethisterone for menstruating women
   11. Consider pethidine 25-50mg intravenous for rituximab related rigors unresponsive to corticosteroids

2. **Etoposide 100mg/m^2 intravenous infusion in 1000ml sodium chloride 0.9% over 60 minutes**
3. **Mesna 3000mg/m² intravenous infusion in 1000ml sodium chloride 0.9% over 8 hours**

**Administration instructions**

To start immediately at the end of the last ifosfamide/mesna infusion bag. If required this may be given as oral mesna. A dose of 1800mg/m² oral mesna tablets (rounded upwards to the nearest 400mg) should be given at 0, 2 and 6 hours after the end of the last ifosfamide infusion.
This chemotherapy protocol has been developed as part of the chemotherapy electronic prescribing project. This was and remains a collaborative project that originated from the former CSCCN. These documents have been approved on behalf of the following Trusts:

- Hampshire Hospitals NHS Foundation Trust
- NHS Isle of Wight
- Portsmouth Hospitals NHS Trust
- Salisbury Hospital NHS Foundation Trust
- University Hospital Southampton NHS Foundation Trust
- Western Sussex Hospitals NHS Foundation Trust

All actions have been taken to ensure these protocols are correct. However, no responsibility can be taken for errors that occur as a result of following these guidelines.
