Agenda Trust Board – Open Session

Date 28/11/2019
Time 9:00 - 11:15
Location Conference Room, Heartbeat Education Centre, F Level, North Wing, SGH
Chair Peter Hollins
Apologies Tim Peachey, Non-Executive Director

1. Chair’s Welcome, Apologies and Declarations of Interest
   9:00
   To note apologies for absence, and to hear any declarations of interest relating to any item on the Agenda.

2. Minutes of Previous Meeting held on 31 October 2019

3. Matters Arising and Summary of Agreed Actions
   To discuss any matters arising from the Minutes, and to agree on the status of any actions assigned at the previous meeting.

4. Quality, Performance and Finance
   Quality includes: clinical effectiveness, patient safety, and patient experience

   4.1. Patient Story
          9:15
          To receive feedback from patients, carers, or other stakeholders about their experience of the Trust’s services.

   4.2. Briefing from Chair of Charitable Funds Committee for review (Oral)
          Jenni Douglas-Todd, Non-Executive Director

   4.3. Briefing from Chair of Quality Committee for review (Oral)
          Cyrus Cooper for Tim Peachey, Non-Executive Director

   4.4. Briefing from Chair of Strategy & Finance Committee for review (Oral)
          Jane Bailey, Non-Executive Director

   4.5. Integrated Performance Report for Month 7 for review
          9:40
          To review the Trust’s performance as reported in the Integrated Performance Report and the Quarterly Infection Prevention and Control Report.
          Sponsor: Jane Hayward, Director of Transformation & Improvement

   4.6. Annual Ward Staffing Nursing Establishment Review for review
          10:20
          Sponsor: Gail Byrne, Director of Nursing & Organisational Development
          Attendee: Rosemary Chable, Deputy Director of Nursing, Education & Workforce
2019/20 Influenza Vaccination Programme for review
Sponsors: Paula Head, Chief Executive
Attendees: Steve Harris, Director of Human Resources and Julia Smedley, Consultant, Occupational Health

Informatics Update for review
Sponsor: Jane Hayward, Director of Transformation & Improvement
Attendee: Adrian Byrne, Director of Informatics

Finance Report for Month 7 for review
Sponsor: David French, Chief Financial Officer

Corporate Governance, Risk and Internal Control

7 Day Services Self-Assessment - Autumn/Winter 2019/20 for approval
Sponsor: Jane Hayward, Director of Transformation & Improvement

Register of Seals, and Chair’s Actions for ratification
In compliance with the Trust Standing Orders, Financial Instructions, and the Scheme of Reservation and Delegation.
Sponsor: Peter Hollins, Trust Chair

Any other Business
To raise any relevant or urgent matters that are not on the agenda

To note the date of the next meeting: 9 January 2020, in the Conference Room, Heartbeat Education Centre, F Level, North Wing, SGH

Exclusion of press, public, and others
The public and representatives of the press may attend all meetings of the Trust, but shall be required to withdraw upon the Board of Directors resolving as follows “that representatives of the press, and other members of the public, be excluded from the remainder of this meeting as publicity would be prejudicial to the public interest by reason of the confidential nature of the business to be transacted.”

Items circulated to the Board for reading
7 November 2019
Press Release: Doctors use pioneering ‘pocket’ ultrasound to beam scans to iPhones in an instant
15 November 2019
Press Release: Southampton’s Princess Anne Hospital to go purple for World Prematurity Day
18 November 2019
Press Release: Health professionals spend ‘day in life’ of inflammatory bowel disease patients using innovative 24-hour app (embargoed)
9.1 Learning from Deaths 2019/20 Quarter 2 Report
Sponsor: Derek Sandeman, Medical Director

9.2 CRN: Wessex 2019/20 Quarter 2 Performance Report
Sponsor: Derek Sandeman, Medical Director

10 Follow-up discussion with governors
11:15

11 Clinical Visit - Patient Safety Team (showcase the work of the patient safety team including discussing IMEG)
11:30

12 Lunch
12:45
Minutes Trust Board – Open Session

Date 31/10/2019
Time 9:00 - 11:40
Location Conference Room, Heartbeat Education Centre, F Level, North Wing, SGH
Chair Peter Hollins (PTH)
Present Jane Bailey (JB) Non-Executive Director (NED); David Bennett (DB) NED; Gail Byrne (GB) Director of Nursing & Organisational Development (DoN & OD); Cyrus Cooper (CP) NED; Jenni Douglas-Todd (JD-T) NED; David French (DAF) Chief Financial Officer (CFO); Jane Hayward (JH) Director of Transformation & Improvement (DoT&I); Paula Head (PH) Chief Executive Officer (CEO); Tim Peachey (TP) NED; Derek Sandeman (DS) Medical Director (MD), Simon Porter (SP) Senior Independent Director (SID) & NED

Attendees Charlie Helps (CH) Company Secretary (Interim), Duncan Linning-Karp (DL-K) Director of Operations for Emergency Services, Jacqui McAfee (JMcA) Director of Operations for Elective Services

Apologies Steve Harris (SH) Director of Human Resources (DoHR)

Minutes Sarah Smithurst

1 Chair’s Welcome, Apologies and Declarations of Interest
The Chairman welcomed those present in particular Tim Peachey, NED and Jacqui McAfee and Duncan Linning-Karp, acting on behalf of the Chief Operating Officer. The Chairman noted apologies and asked for any new declarations of interest in matters on the Agenda. No conflicts of interest with items on the Agenda were declared.

2 Minutes of Previous Meeting held on 26 September 2019
The minutes of the previous meeting were agreed as true and fair.

3 Matters Arising and Summary of Agreed Actions
To discuss any matters arising from the Minutes, and to agree on the status of any actions assigned at the previous meeting.

ACTION 80) Defect work orders – completed.

ACTION 81) Workforce reports – This had been incorporated into JB’s governance review.
4 Quality, Performance and Finance

Staff Stories
To receive feedback from patients, carers, or other stakeholders about their experience of the Trust's services.

October’s stories related to the impact of aggressive and violent behaviour experienced by three front line staff within the Trust and the physical and emotional effects suffered thereafter. GB and the Board thanked those staff members who were in attendance to present their stories to the Board.

Questions were raised by various members of the Board in relation to the counselling available and whether it was tailored accordingly. As Chair of the Wellbeing Group, PH would raise the issues discussed as a priority. GB would also take that forward to the group leading on Violence & Aggression Steering Group.

It was noted that returning to work following an incident of sickness, which was a direct result of assault injuries sustained at work, appeared to be too process driven with a lack of compassion and understanding. It was agreed that that issue should be addressed.

The Board again thanked the staff who took the time to give an account of their moving experiences which highlighted a series of issues to take forward. It was agreed that whilst the Trust could not take the risk of violence away completely, it must do more to provide appropriate security, support and emotional care to those who were affected.

**ACTION:** SH to review the support offered to those staff members suffering violence and the application of Trust policy in relation to the withholding of salary from those victims of violence unable to work.

**ACTION:** GB to inform the staff members involved of the outcome of the above.

4.2 Briefing from Chair of Quality Committee for review
CC summarised the items discussed at the October Quality Committee:
- Non-Clinical Out-of-Hours bed moves. Progress report on intervention will return to the QC in 6 months on project to measure and improve bed availability.
- Progress on Quality Improvement Framework 2019/20 including: Mental capacity and deprivation of liberty protection safeguards; Safe discharges and care handover; Health services for patients with learning disabilities; and, Emergency Access Performance Quarterly Update.
- Patient Safety including: Ophthalmology update; and, Learning from Never Events.
- Clinical Effectiveness Outcomes Report: overall outcome excellent.
4.3 Briefing from Chair of Audit and Risk Committee for review
SP summarised the items discussed at the October Audit & Risk Committee:
- Standing Financial Instruction – this would be discussed at item 6.4.
- Data Protection – New DPO in post who is making good progress.
- Risk Management – New Risk Management System has been installed.
- Annual Litigation & Insurance Review – Whilst cases are handled centrally, the Committee reviews the Trust cases regularly.
- Audit assurance was received by the Committee that the programmes of work are on schedule.

The question was raised whether the Board was getting sight of the nature of the claims. TP will ensure that this is picked up through the Quality Committee and provide a periodic summary to the Board. It was noted that the CFO and MD were thoroughly reviewing all events that led to the issues.

ACTION: TP to provide a periodic summary to Board of claims made against the Trust.

4.4 Briefing from Chair of Strategy & Finance Committee for review
JB summarised the items discussed at the October Strategy & Finance Committee:
- Monthly financial performance - It was felt that this had been a ‘solid’ month with no particular issues to note.
- The impact of pensions on delivery. The finance team was attempting to quantify the impact on performance.
- Cost Improvement Programmes (CIPs). The Committee was satisfied that control of CIPs was improving although delivery remained behind plan.
- Possible financial year-end scenarios. The Committee had explored the risks associated with the year’s outcome. There would be no recommendation for any change in the forecast before Q3.
- Capital Plan Reviews – The Committee continued to track spending which was just below plan. It appeared that it might be possible to bid for capital from the centre and there was a need to have cases prepared accordingly.
- A report was presented to the Committee showing greater visibility of future business cases which it found very helpful.

4.5 Integrated Performance Report for Month 6 for review
- JD-T expressed concern at the increased levels of staff sickness and asked what was being done to address that issue. PH responded by stating that reviews were taking place to look underneath the sickness to see what was driving the increase. Demand and capacity differences might be impacting on wellbeing and that was a focus for the Wellbeing Group and proactive management of stress and ensuring muscular skeletal (MSK) related issues had direct access for treatment were being reviewed.
- PTH noted that there was a medication error which appeared to result from the misidentification of a patient and observed that there had been a disturbing number of such cases in recent months. DS reported that more training and support was required to ensure that such misidentification was avoided in the future.
**ACTION:** The Quality Committee would review progress on eliminating the possibility of patient mis-identification in 6 months’ time and feed back to the Board.

- PTH expressed concern around the Referral to Treatment (RTT) and Emergency Department (ED) performance figures and asked for assurance that the hospital was moving in an improved direction. JMcA said that the national performances on both were deteriorating.
- JMcA gave examples of work being undertaken to improve the position on RTT on cardiology and neurology in particular.
- GB highlighted that the newly qualified nurses were not currently being shown in the workforce figures but would as the Trust moved into the winter.
- JB asked for more time for the Board to review Research and Development (R&D) Strategy. PTH suggested that could return to the Board as a study session topic.

**ACTION:** PTH to identify an opportunity to discuss R&D strategy during a Board Study Session.

- SP queried the 6% increase in delayed transfer of care equating to a figure of over 100 beds, and asked if there were any special features in September which had caused it. JH felt that might result from a dip in domiciliary care packages over the summer. That had been escalated to the Southampton City Clinical Commissioning Group (CCG) and North and West Hampshire CCGs and it has been noted in the system wide winter plan.
- In response to a question from JD-T on recruitment to My Medical Record, JH suggested that it would be more meaningful to show the data as a cumulative number.
- CC highlighted that there was much strength in having a shared research and development mission with the University and it was important for the two organisations to work together. PH was scheduled to meet new VC and would discuss an alignment of clinical and strategic thinking. A University of Southampton (UoS) and UHS Board to Board meeting was suggested for the future.

**ACTION:** PH to arrange a joint meeting of the UHS and UOS Boards.

- GB reported that the Trust continued to struggle to reach the 95% target for Venous Thromboembolism (VTE) assessments. TP asked if that was due to the work not being done or not recorded. GB confirmed that it was mainly a problem of recording.

### 4.6 Finance Report for Month 6 for review

DAF presented the month six Finance Report stating for October that:

- September was a ‘steady month’ resulting in a surplus for the month of £0.4m which was £0.2m better than plan. Year to date (YTD) the Trust was reporting a £0.5m surplus, which was £2.7m better than the planned deficit of £2.1m at that stage in the year.
- YTD elective was 2% (£1.7m) below plan whereas YTD non-elective was £7m (7%) above plan despite some recent respite in A&E attendance volumes.
- Pay costs were slightly lower in September after adjusting for the medical
bank pay which was all paid in August. Agency spend was well below the cap, but that might be creeping back up.

- CIP performance was £2.5m in September, £1m behind plan due to overall income not being high enough to recognise the CIP.
- The forecast for CIP was a key element of the year-end financial outcome. Detailed discussions took place with the Strategy & Finance Committee. Whilst the view was that achieving the original planned surplus of £17m was looking unlikely, a good outcome was still achievable with a Q3 surplus and a possible overall Use of Resources score of 2 rather than 3.

PTH noted the work being undertaken and felt that it was a reflection on the good financial management by the finance team.

5 Strategy and Business Planning

5.1 Trust Winter Plan for approval

The Chairman thanked JMcA, DLK and their teams for their input on the document.

DL-K presented the Plan and the work being undertaken to allow the Trust to meet the winter pressures. That was compiled in conjunction with clinical teams which recognised that was the best option to see the Trust through the winter period. The plan would be circulated via Staffnet, through various consultants, nursing and staff meetings and sessions would be available for all staff to attend. Staff already felt reassured that a plan is in place and written down and it was recognised that escalation and understanding was important going forward.

SP asked when the Board would know if the plan was making a difference to emergency attendances over the winter. Southampton Clinical Commissioning Group (SCCG) had launched a targeted campaign and are working on communicating the message out into the wider community. It was noted that the Urgent Treatment Centres would not affect the winter pressure.

Discussion took place around the Emergency Department Approach and the imbalance between capacity and demand. PTH suggested that the Trust should be looking further ahead than was currently the case. PH reported that this is part of the wider system with some parts included in the LTP which would be incorporated into future plans as part of the strategic plan.

The Board noted that it was a well-considered and balanced winter plan.

6 Corporate Governance, Risk and Internal Control

6.1 Feedback from Council of Governors’ (CoG) meeting 8 October 2019

PTH summarised the items considered at the at the October Council of Governors meeting which had involved the new cohort of governors. Items discussed were;

- CoG NED Q&A session
- The CEO’s usual review
- An update from the Hospital Charity
- Membership engagement following concern over the quality of
**6.2 EU Exit Briefing for review**

PH presented this briefing highlighting that:

- Work going on behind the scenes to ensure NHS patients will remain safe.
- JMcA had been attending regular meetings.

**6.3 Board Assurance Framework (BAF) 2019 Quarter 2 Update for review**

The Board thanked CH for producing the document and the following items were reviewed:

BAF05 – DB expressed concern over the delivery of safe and timely care in relation to our current score of 25 against and asked if a target score of zero was realistic. It was noted that the risk level reflected the position in Ophthalmology. Zero was the risk appetite statement.

BAF 08 – JD-T asked whether the Quality & Diversity risk was properly represented. GB responded that there would be a review of the Workforce Race Equality Standard (WRES) action plan and also had a proactive network which was not reflected in the report. There had been challenges in the WRES particularly around bullying and harassment and there was a plan to also review the milestones.

BAF 02 – PH reported a series of actions which were taking place involving regular contact with the regulators. They were encouraged by the Trust’s improvements even though it was not improving at the rate at which they would like.

BAF 10 - JB acknowledged that the R&D risk had increased but suitable action had been taken.

**6.4 Review of Standing Financial Instructions 2019-20 for approval**

DAF presented the 2019 Standing Financial Instructions highlighting that the paper showed the rationale behind the proposed changes and that the Audit & Risk Committee was satisfied with the recommendations.

There was some discussion over the delegations to directors and the separation of duties in relation to the Chief Financial Officer and Deputy CEO.

PTH commented on the Capital Investment proposals which regularly come to the Board and asked if it was sensible to differentiate between those which had been included in the annual plan and those which had not. It was agreed that only projects involving capital expenditure of £2.5m or above would come to the Board for sanction irrespective of whether they had, or had not, been included in the annual plan, unless there were extraordinary circumstances.
**Decision**
It was agreed that the level of investment which comes to the Board was to be changed to £2.5m.

The Board approved the Standing Financial Instruction 2019-20 subject to the few changes suggested.

**6.5 Register of Seals, and Chair’s Actions for ratification**

**Decision**
The Board ratified the Chair’s actions taken in the month.

**7 Any other Business**

DB reported that he had been invited to take up the role of NED at the Faculty of Leadership and Medical Management, which was a national intercollegiate professional body and which promotes excellence in leadership on behalf of all doctors in the UK. The Board agreed that there was no conflict of interest involved in that. It would be recorded on the Register of Interests by the Interim Company Secretary.

**8 To note the date of the next meeting: 28 November 2019, in the Conference Room, Heartbeat Education Centre, F Level, North Wing, SGH**

# Integrated Performance Report 2019/20 Month 7

## Title:
Integrated Performance Report 2019/20 Month 7

## Category:
Quality, Performance, and Finance

## Agenda item:
4.5

## Sponsor:
Director of Transformation and Improvement

## Author:
Trust Performance Manager

## Provenance:
The Integrated Performance Report is reviewed monthly by the Board of directors

## Classification:
This Report is unclassified.

## Purpose and recommendation:
The paper is presented for REVIEW.

## Relevant strategic goals:
- **Goal 1:** Improving patient journeys.
- **Goal 2:** Delivering value-based health and care.
- **Goal 3:** Supporting healthy lives.
- **Goal 4:** Building an expert and inclusive workforce.
- **Goal 5:** Being agile in meeting people’s needs.
- **Goal 6:** Creating leading-edge research, education, and innovation.

## Assurance framework links:
- BAF01 – Inability to develop partnerships and redesign services innovatively renders the Trust unable to meet the expectations of the NHS long term plan, our strategic plan, and sustainable elective and non-elective pathways.
- BAF02 – Failure to deliver regulatory requirements causes the Trust to breach the terms of its Provider Licence leading to a loss of local leadership due to an enforced change in Board and Executive composition, impacting on Goals 1 to 6.
- BAF03 – Failure to achieve financial targets results in a shortfall in cash required to deliver the capital programme.
- BAF04 – Reduced access to resources compromises the quality of services.
- BAF05 – Capacity and capability gaps in the workforce lead to an inability to provide safe and timely care.
- BAF06 – Lack of capacity and agility renders the Trust unable to respond to the changing operating environment, causing a failure to provide contracted services.
- BAF07 – Poor staff wellbeing and engagement leads to an inability to deliver safe and timely care.
- BAF08 – Lack of inclusion and diversity results in the failure to get the best from every individual.
- BAF09 – Failure to respond with the necessary organisational changes in design and operation renders the Trust unable to remain a competent NHS Provider.
- BAF10 – Inability to offer translational research renders the Trust unable to maintain its cutting-edge teaching hospital status.

## Impact assessments:

Integrated KPI Board Report Digest

Improving patient Journeys

October was a challenging month for UHS across both the elective and non-elective pathways. However, we saw relevant consistent ED performance that remained above 80%. There was no agreed trajectory for the month of October.

Non elective length of stay remained at 6.4 in October. Delayed transfers of care remained relatively stable at 6.8% against a target of 3.5%. We have continued to work closely with system partners and we are working together to ensure we have additional capacity in the winter months. We have signed of plans to open additional beds both at UHS and in the community to support winter flow.

Adult bed occupancy has been consistently higher this autumn compared to last autumn at around 95%. We have had a 7.8% growth in emergency attendances and a 4.2% increase in non-elective spells (year to date) accounting for the additional inpatients this summer. While the total number of ED attendances in October reduced slightly from September there was a 13% increase in attendances compared to the same period last year. While we have seen a reduction in Length of Stay in some care groups particularly Medicine for Older People and Surgery we did not see the level of improvement needed in September.

We have continued to work within division B to reduce LOS particularly with patients waiting longer than 21 days. While the project has shown some early signs of success, we are confident that we can improve significantly faster with support from PwC.

While we have not met the trajectory we did see further improvements in emergency access performance in October. Type 1 performance in October was 80.5% and we ranked 4\textsuperscript{th} of 8 Major Trauma Centre peers (8\textsuperscript{th} being worst). Local delivery system performance was at 87.2% in September against a target of 90.0%. The main factors in improvement were the additional junior doctor numbers, and the improved minor injury performance. The recovery plan is being delivered based on the recommendations of Matthew Cooke, a national clinical advisor. This is being monitored fortnightly with the national team and a new system plan has been agreed with weekly CEO oversight. The number of patients cancelled and not re-admitted was higher than normal due to poor bed flow and high non-elective demand in critical care.

Percentage of patients on an open Referral to treatment pathway (waiting list) who have waited less than 18 weeks in October is at 81.5%. The drop in operating and outpatient clinic activity over the summer months due to annual leave and reduced backfill of capacity as a result of pension impact remains an undercurrent within the waiting list. The list increased in size by 743 patients despite October being the 2nd highest volume of patient’s clock stops this year for both admitted and non-admitted care. Anaesthetics has recruited to 4 vacant posts substantively and this maintains the positive progress with regard to the long standing mismatch between demand and capacity in the service and should build in some resilience for the winter. There were four patients waiting longer than 52 weeks at the end of October, 3 x ENT and 1 x Gastroenterology.
6 week diagnostic performance remains under target at 97.7% however this is the 4 month in a row where there has been an improvement in delivery against a standard of 99%. Despite not achieving target UHS continues to buck the national trend for diagnostics with a slow but steady improvement.

Average weeks waited for first outpatient appointment sits at 8.7 which is exactly the same as 12 months ago reflecting the increase in referrals which has wiped out any gains made in pathway changes or transformation of first OP services.

Overall performance of the 62 day cancer wait metric still remains below target as does 31 days. UHS was ranked 8th (10th being worst) out of a peer group of 10 similar size teaching hospitals. The issues impacting on cancer capacity remain consistent with reduce WLI to support clearance lists and additional diagnostics. UHS continues to work closely with the Wessex cancer alliance and NHSI.

2 week GP referral cancer waiting time performance remains high, achieving target for the seventh month in a row.

**Delivering value based health and care**

The Reference Cost Index (RCI) is a measure of relative efficiency within NHS providers. An RCI of 100 indicates costs are in line with the national average, below 100 indicates costs are below the national average. UHS had an RCI of 98 in 2016/17 and 96 in 2017/18 i.e. in 2017/18 UHS was 4% (£27m) more cost efficient than the average NHS Trust.

Cost per Weighted Activity Unit (WAU) is the headline productivity metric used within the Model Hospital. Costs are adjusted for local variations in the cost of providing healthcare using the Market Forces Factor (MFF). In 2017/18 UHS cost per WAU was £3,358 which is in quartile 1 (the lowest 25% in the nation), the national median for 2017/18 was £3,486.

The Model hospital in association with the GIRFT team has now published up to date clinical metrics for 7 surgical Specialties, these will be updated at regular intervals in the year for trust to monitor and review.

Getting it right first time (GIRFT) is a national programme designed to improve the quality of care within the NHS by reducing unwarranted variations. At UHS 21 out of 33 clinical specialties has been visited. With 19 of these now having a clinically lead quality improvement and specialty lead investigation programmes agreed with the GIRFT central team.

The latest national data (August 2019) showed a median CHPPD for similar size (clinical output) trusts as 5.5 for registered nurses and 9.0 overall, UHS was at 5.5 and 9.0 respectively that month.

For the last 10 months the trust has achieved the target for complaints closed within 35 days, in October we achieved 84% against a target of 70%.
Supporting healthy lives
C. difficile cases achieved below limit in October with 2 against a limit of 5, of these none were deemed a lapse in care. We are below the limit of cases year to date with 32 cases against a limit of 35.

There were four moderate harm medication incident reports in October. Three were avoidable errors.
One involved a patient self-administering an antimicrobial nebuliser to which they were allergic. The nebuliser had been incorrectly selected and left with the patient to administer. All appropriate action was taken at the time to treat the patient. The incident has been scoped and is under investigation. The ward have reviewed their administration processes.
One involved a patient who was discharged on an incorrectly increased dose of phenytoin, they were subsequently admitted to HHFT with phenytoin toxicity and treated appropriately. The prescribing error was missed at the screening stage. Both the prescriber and pharmacist are aware of the incident and the medication safety team are currently clarifying the finer details of the process involved in prescribing and screening.
One involved a PICU patient on ECMO who received an incorrectly prepared infusion of the anticoagulant heparin. PICU have carried out an excellent investigation with clear changes and learning which has been reviewed by the medicines safety group.
The unavoidable incident relates to a patient in endoscopy who required reversal of the sedation with flumazenil. All cases where flumazenil is required are regarded as potential errors. Endoscopy have investigated the case appropriately and ascertained that the doses used during the procedure were correct and the patient responded slightly more sensitively than usual.

Patients screened for risky behaviours in October (alcohol consumption and smoking) remain stable well above target (currently 98% against a target >80%). Of those found to have moderate or high alcohol dependence 88% were given relevant advice or a referral to specialist services in October, this performance is stable not achieving the target 90% (last achieved December 2018). Of those found to smoke who were given advice or offered medication performance in October was 83%, below the target 90%. CQUIN funding has been awarded for further Medicines Management Team members for the duration of the CQUIN – until the end of March 2020. This will allow for some out of hours and weekend work targeting specific areas that there is currently low uptake on. These members will predominately focus on the tobacco advice and offering of medication as it is felt that there is a robust enough system in place currently focussed on the alcohol elements of the CQUIN. We have also now set up a weekly report to inform all members of how we are doing within the quarterly milestone so that focus can be moved if required. There is similarly a monthly Tobacco meeting to discuss any concerns so that any escalations are dealt with in a timely manner.

Building an expert and inclusive workforce
In UHS ward-based areas, total nursing staff vacancies have decreased by -0.43% since last month.
Registered nurse vacancies in ward-based areas have also decreased this month (by -1.10% since last month). These changes are due to promotion of RNs, relocation of staff and reduction in contracted hours mainly following return from maternity leave, however to offset this 13 Overseas nurses have acquired their PINs.

This month some key targets have been missed for staff turnover and appraisals. Sickness absence rates have increased for the fourth month and are now on above target. CHPPD has decreased but this is likely due to a change in where we are gathering data from compared to last month. UHS has seen improvements in rates of employment for BAME Band 7+.

Additionally, the position for the following is decreasing: statutory and mandatory training compliance (with 6 of 12 measures meeting target).

The total CHPPD rate in the Trust has remained stable from last month to RN 5.4 (previously 5.4), HCA 3.3 (previously 3.3) overall 8.7 (previously 8.7).

The CHPPD for ward based areas (excluding Critical care units) in the Trust has increased from last month to RN 4.0 (previously 3.9) HCA 3.5 (previously 3.5) overall 7.5 (previously 7.4)

**Being agile in meeting people’s needs**

Estates helpdesk requests completed on time did not achieve target in October (8th month in a row), currently at 77.8.0% on a slow downward trend. Unresolved help desk requests remain below target but have increased by 30% in the last two months, in October we had 871 against a target <1000. Unresolved requests over 30 days old is holding at over 300 against the target <200. Percentage defect work orders completed on time did not meet the target >85% in October falling to 82.6%. The percentage of statutory and mandatory jobs completed on time remains stable and continues to meet the target 95%.

The EFCD team have looked at the effect of not performing some maintenance tasks in a timely manner and considered how this impacts patients. A simple comparator of the failure rate of toilets has been selected. In October the monthly average unavailable toilets was 0.8%.

For eQuest usage - Microbiology and immunology increased in both requesting and acknowledging along with the gradual increase in Histopathology samples. Significant work is planned in the month of November to make eQuest requesting available in Theatres.

UHS patient logins to My Medical Record continues an upward trend in October following the surge in June linked to a new registration method, patient registrations has plateaued and sits at 2865 in October. The plan is to increase to 100,000 registrations by the end of this year.

**Leading edge research, education and innovation**

In Q2 2019/20 UHS was ranked 6th for non-weighted and 5th for weighted CRN recruitment against a target of being in the top 10 and top 5 respectively.

In Q2 UHS are currently ranked 14th for contract commercial study recruitment, which whilst an improvement against previous recent performance (up from 16th), is still not meeting our target
of being in the top 10, which has prompted a specific focus on improving our commercial performance.

Comparative CRN recruitment performance by specialty was on target in Q2 2019/20 with 52% specialties ranking as predicted (in the top 5 or top 10 based on prior performance).

Proportion of commercial studies closing in 18/19 FY on time and to recruitment target ended the year below the 80% target at 71% in Q4; however this was an improvement on the 17/18 performance of 57%. In Q2 2019/20 this metric is currently at 58%, but we anticipate that this will improve significantly by year end.

Proportion of non-commercial studies closing on time and to recruitment target in Q2 is currently at 47% but again we anticipate that this will improve significantly by year end.

Clinical study set up and recruitment (in particular for the commercial portfolio) has been impacted by capacity constraints across the research infrastructure and by pressures within the clinical services, in particular with regards to pharmacy capacity to set up and deliver clinical trials. Concerns have been escalated to Trust Executives.

The year to date NIHR CRF & BRC publications in 2019/2020 is currently 137 (10% less than same time last year), related to a loss of clinical academic staff. This is a major concern for our next BRC and CRF applications. Actions are currently in progress that will require Trust support in due course.

<table>
<thead>
<tr>
<th>Chart Type</th>
<th>Example</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cumulative Column</td>
<td><img src="image" alt="Cumulative Column Chart" /></td>
<td>A cumulative column chart is used to represent a total count of the variable and shows how the total count increases over time. This example shows quarterly updates.</td>
</tr>
<tr>
<td>Cumulative Column Year on Year</td>
<td><img src="image" alt="Cumulative Year on Year Chart" /></td>
<td>A cumulative year on year column chart is used to represent a total count of the variable throughout the year. The variable value is reset to zero at the start of the year because the target for the metric is yearly.</td>
</tr>
<tr>
<td>Line Benchmarked</td>
<td><img src="image" alt="Line Benchmarked Chart" /></td>
<td>The line benchmarked chart shows our performance compared to the average performance of a peer group. The number at the bottom of the chart shows where we are ranked in the group (1 would mean ranked 1st that month).</td>
</tr>
<tr>
<td>Line Percentiles</td>
<td><img src="image" alt="Line Percentiles Chart" /></td>
<td>A line percentiles chart is used to represent the distribution of a variable. The 50th percentile shows the median value, we also show the 5th, 25th (lower quartile), 75th (upper quartile) and 95th centiles.</td>
</tr>
<tr>
<td>Control Chart</td>
<td><img src="image" alt="Control Chart" /></td>
<td>A control chart shows movement of a variable in relation to its control limits (the 3 lines = Upper control limit, Mean and Lower control limit). When the value shows special variation (not expected) then it is highlighted green (leading to a good outcome) or red (leading to a bad outcome). Values are considered to show special variation if they - Go outside control limits - Have 6 points in a row above or below the mean, - Trend for 6 points, - Have 2 out of 3 points past 2/3 of the control limit, - Show a significant movement (greater than the average moving range).</td>
</tr>
<tr>
<td>Variance from Target</td>
<td><img src="image" alt="Variance from Target Chart" /></td>
<td>Variance from target charts are used to show how far away a variable is from its target each month. Green bars represent the value the metric is achieving better than target and the red bars represent the distance a metric is away from achieving its target.</td>
</tr>

CHPPD Overall Comments

Band 4 staff working to support registered nurse numbers; Safe staffing levels maintained.

Additional staff used for enhanced care - Support workers; Safe staffing levels maintained; Beds flexed to match staffing.

CHPPD (Care Hours Per Patient Day) is a measure which shows on average how many hours of care time each patient receives on a ward /department during a 24 hour period. The total hours planned is our planned staffing levels to deliver care across all of our areas but does not represent a baseline against which to measure actual staffing numbers.

Vary across wards and departments based on the specialty, interventions, acuity and dependency levels of the patients being cared for. There have been additional beds supported for Cardiovascular patients on Trauma and Orthopaedics.

Report notes

Staffing an intense care high dependency unit is always adjusted depending on the number of patients being cared for and the level of support they require. Therefore the numbers will fluctuate considerably across the month when compared against our planned numbers.

Over recent months some wards have temporarily changed specialty to support seasonal changes in demand - these best efforts are often swift to react and occur short of time periods to allow for reports. These short notice changes are expected to continue into the Winter. In October over recent months some ward beds have temporarily changed specialty to support seasonal changes in demand - these best efforts are often swift to react and occur short of time periods to allow for reports. These short notice changes are expected to continue into the Winter. In October over recent months some ward beds have temporarily changed specialty to support seasonal changes in demand - these best efforts are often swift to react and occur short of time periods to allow for reports. These short notice changes are expected to continue into the Winter. Enhanced Care (also known as Specialling)

This is a initiative which allows us to use our resources to support changes in demand. This enables us to flex our resources effectively to meet the needs of our patients in a safe and timely manner.

Currently we are providing Enhanced Care to support seasonal changes in demand in our wards. This allows us to flex our resources to meet the needs of our patients in a safe and timely manner.

We are constantly reviewing our resources to ensure that we are meeting the needs of our patients in a safe and timely manner.

In the future we will be looking at extending Enhanced Care to other areas of our hospital.

CHPPD (Care Hours Per Patient Day)

CHPPD is a measure of our patient care. It is calculated by dividing the total number of patient hours by the number of patient days. This gives us an idea of how many hours our patients are using our resources.

As you can see, our CHPPD is well below the national average. This is due to our efficient use of resources and our focus on patient care.

In the future we will be looking at ways to further improve our CHPPD. This will involve increasing our throughput, improving our efficiency and reducing our waste.

We are confident that we will be able to achieve this by continuing to focus on patient care and ensuring that our resources are used effectively.
Patient requiring 24 hour 1:1 nursing in the month; Staff moved to support other wards. Safe staffing levels maintained; Safe staffing levels maintained. Staffing appropriate for number of patients. Support workers used to maintain staffing numbers; Patient requiring 24 hour 1:1 nursing in the month. Staff moved to support other wards; Safe staffing levels maintained.

Report notes
The staffing levels are monitored daily and we will risk assess and fill any gaps to ensure that safe staffing levels are always maintained.

Enhanced Care (also known as Specialling)

Locum when patients in an area require more focused care than we would normally expect. In these cases, additional staff are assigned to support a ward if Enhanced Care is required. The number of locums will fluctuate considerably across the month depending on what we or our partners have planned.

CPR (Code Patient at Risk)

This is a term which shows an average how many hours of actual time each patient receives on a ward (Department) during a 24 hour period from registered nurses and support staff - this will vary over shifts and departments based on the specialty of interventions, acuity and dependency levels of the patients being cared for.

</tbody>
</table>

Note: Total hours planned is our planned staffing levels to deliver care across all of our areas but does not represent a baseline safe staffing level. We plan for an average of one registered nurse to every four or six patients as we are not able to guarantee one to one ratios of care but this is currently the highest staffing level we plan for an area at any one time. Numbers will fluctuate considerably across the month depending on what we or our partners have planned.

3.2

Staffing appropriate for number of patients. Support workers used to maintain staffing numbers; Patient requiring 24 hour 1:1 nursing in the month. Staff moved to support other wards; Safe staffing levels maintained. Support workers used to maintain staffing numbers; Patient requiring 24 hour 1:1 nursing in the month. Staff moved to support other wards; Safe staffing levels maintained.

4.7

This is a term which shows an average how many hours of actual time each patient receives on a ward (Department) during a 24 hour period from registered nurses and support staff - this will vary over shifts and departments based on the specialty of interventions, acuity and dependency levels of the patients being cared for.

The authenticity of Enhanced Care is a concern which shows a core group of staff that the ward staff discuss and creates a team of staff that are available to support patients as required.

5.9

This is a term which shows an average how many hours of actual time each patient receives on a ward (Department) during a 24 hour period from registered nurses and support staff - this will vary over shifts and departments based on the specialty of interventions, acuity and dependency levels of the patients being cared for.

The authenticity of Enhanced Care is a concern which shows a core group of staff that the ward staff discuss and creates a team of staff that are available to support patients as required.

Conclusion

Over recent months some wards have temporarily changed specialty to support seasonal changes in demand - these changes are often swift in nature and for short periods of time such as the flu. There have been additional bed blocks for Elective patients on Trauma and Orthopaedics.

Conclusion

Over recent months some wards have temporarily changed specialty to support seasonal changes in demand - these changes are often swift in nature and for short periods of time such as the flu. There have been additional bed blocks for Elective patients on Trauma and Orthopaedics.

Report to the Trust Board of Directors dated Thursday, 28 November 2019

Title: Ward Staffing nursing establishment review August 2019 – October 2019

Category | Quality, Performance, and Finance
---|---
Agenda item | 4.6
Sponsor | Director of Nursing and Organisational Development
Author | Rosemary Chable – Deputy Director of Nursing & Education and Workforce

Provenance
Report on the systematic review of ward staffing presented annually to TEC since 2009 and 6 monthly to Trust Board since 2014. Now reported annually to TB with 6 monthly light-touch reviews presented at divisional boards.
Review findings validated at Nursing and Midwifery Staffing Review Group on 15th October 2019.
The report was presented and recommendations agreed at TEC on November 13th 2019.

Classification | This Report is unclassified.

Purpose
The paper is presented for REVIEW.
The report details the methodology, findings, risk assessment and recommendations arising from the ward staffing review undertaken from August 2019 – October 2019.

The report also outlines UHS progress in meeting the 38 recommendations included in the NICE guideline (2014) on safe staffing for in-patient wards and provides an update on the action – plan to achieve the recommendations in the national staffing levels guidance published by the National Quality Board in July 2016 (a key requirement of the NHSI ‘Developing workforce safeguards’ guidance (October 2018).

The report is presented in full to Trust Board as an expectation of the National Quality Board guidance on staffing which requires presentation and discussion at open board of all aspects of the staffing reviews.

- To note findings of this annual ward establishment review and the Trust position in relation to adherence to the monitored metrics on nurse staffing levels, specifically:
  - UHS nursing establishments are set to achieve an average 1:3 to 1:8 registered nurse to patient ratio in most areas during the day with the majority (39) set between 1:4 to 1:7. Exceptions are where there is a planned model of trained band 4 staff and is particularly evident in Medicine and Medicine for older people.
  - The majority of wards (28) are staffed at between 50:50 and 70:30 registered/unregistered AWL ratio or above. Those wards with lower ratios (16 wards) are linked to the systematic and evaluated implementation of trained band 4 staff where appropriate.
  - Planned total Care Hours Per Patient Day (CHPPD) range from 5.0 – 13.5 and average at 7.1.
- To note the ongoing progress in UHS compliance with the guidance from the National Quality Board on safe, sustainable and productive staffing.
Report to the Trust Board of Directors dated Thursday, 28 November 2019

- To note the ongoing progress in UHS compliance with the NICE guideline on safe staffing for nursing in adult inpatient wards.
- To note and acknowledge the ongoing risks and challenges of matching actual staffing to established staffing levels due to the current vacancy position.
- To continue the Trust wide commitment and momentum on actions to fill vacancies and further reduce the reliance on high cost agency against the backdrop of agency controls from NHS Improvement.
- To discuss the report at TEC and Trust Board as an ongoing requirement of the National Quality Board and developing workforce safeguards guidance around safe staffing assurance.

1.0 Introduction or Background

1.1 The purpose of this paper is to report on the outcomes of the review of ward staffing nursing establishments undertaken from August 2019 – October 2019. This 6 monthly review forms part of the Trust approach to the systematic review of staffing resources to ensure safe staffing levels effectively meet patient care needs.

1.2 This paper focuses specifically on a review of nursing levels for in-patient ward areas. Separate corporate reviews have been undertaken in intensive care, high care areas, emergency admission areas, outpatients and theatres. Some of these other areas are also subject to separate emergent guidance either from NICE or NHS Improvement in relation to safe staffing levels and any specific recommendations will be highlighted separately through Divisional budget setting.

1.3 The report also includes an update on the NICE clinical guideline 1 – Safe Staffing for nursing in adult inpatient wards in acute hospitals, issued in July 2014 and details progress with the action plan for adopting this guideline within UHS (see Appendix 3).

1.4 This report fulfils expectation 1 and 2 of the National Quality Board requirements for Trusts in relation to safe nurse staffing (see Appendix 1) and fulfils a number of the requirements outlined in the NHS Improvement ‘Developing Workforce Safeguards’ guidance (October 2018) which sets out to support providers to deliver high quality care through safe and effective staffing. Organisations should be compliant with the recommendations in this report from April 2019 and are subject to review of this as part of the CQC inspection programme.

2.0 Analysis and Discussion

2.1 Ward staffing review methodology

2.1.1 In 2006 UHS established a systematic, evidence based and triangulated methodological approach to reviewing ward staffing levels on an annual basis linked to budget setting and to staffing requirements arising from any developments planned in-year. All this was aimed to provide safe, competent and fit for purpose staffing to deliver efficient, effective and high quality care and has resulted in consistent year on year review of the nursing workforce matched by increased investment where required.

2.1.2 Following the National Quality Board expectations in 2014 and the refresh in 2016, a full review is now undertaken annually (with a light touch review at 6 months reporting to Divisional boards to ensure ongoing quality) with annual reporting to Trust Board in October/November.

2.1.3 The approach utilises the following methodologies:

- Shelford Safer Nursing Care Tool Acuity/Dependency staffing multiplier (A nationally validated tool reviewed in 2013 - previously AUKUH acuity tool). Now incorporated into the ‘safecare’ module of healthroster, rolled out trustwide, assessed 3 times a day on each ward and used as part of the daily staffing assurance meetings
- Care Hours Per Patient Day
- Professional Judgement
- Peer group validation
- Benchmarking and review of national guidance including Model Hospital data
- Review of eRostering data
- Review of ward quality metrics
2.2 National guidance

2.2.1 In 2013 as part of the national response to the Francis enquiry, the National Quality Board published a guide to nursing, midwifery and care staffing capacity and capability (2013) ‘How to ensure the right people, with the right skills, are in the right place at the right time.’ This guidance was refreshed, broadened to all staff and re-issued in July 2016 to include the need to focus on safe, sustainable and productive staffing. The NQB further reviewed this document and issued an updated recommendations brief in July 2017. The expectations outlined in this guide are presented in Appendix 1. These expectations are fulfilled in part by this review and the detailed action plan (Appendix 2) has been updated with progress towards achieving compliance with the 37 recommendations that make up the 3 over-arching expectations.

2.2.2 The latest review of the action plan (October 2019) shows an improvement on the previous year with UHS compliant with 35 recommendations, with the following 2 outstanding areas progressing but requiring further action before being signed off:

**Allocated time for the supervision of students and learners**: Staffing establishments take account of the need to allow clinical staff the time to undertake mandatory training and continuous professional development, meet revalidation requirements, and fulfil teaching, mentorship and supervision roles, including the support of preregistration and undergraduate students. *Timescale for completion extended to March 2020 as the Trust continues to implement the new supervision and assessment model of coaching (Collaborative Learning in Practice CLiP model) to address the changed guidance on student supervision.* (See section 2.4.3)

**Equality and diversity**: The organisation has clear plans to promote equality and diversity and has leadership that closely resembles the communities it serves. The research outlined in the NHS provider roadmap42 demonstrates the scale and persistence of discrimination at a time when the evidence demonstrates the links between staff satisfaction and patient outcomes. *Ongoing action through Equality & Diversity Group which is reported to Board separately.*

2.2.3 In July 2014 NICE published clinical guideline 1: Safe Staffing for nursing in adult inpatient wards in acute hospitals. This guideline is made up of 38 recommendations. A detailed action plan was developed within UHS and is reviewed 4 monthly by the Nursing and Midwifery Staffing review group. The current assessment (October 2019) shows continued progress with full compliance in 36 recommendations, a further improvement on last year. The 2 remaining recommendations are:

- **Capture of red flag staffing incidents** – *Further widespread Trust rollout and embedding of the red flag function on safecare with compliance expected at the January 2020 review.*

- **Escalation actions taken to address deficits on one ward should not compromise another** - *Monitored as part of the daily reviews of staffing - but unable to assure with current vacancy and staffing position.*

These pose low risk to the Trust and will be achieved with the further embedding of the safecare module of eRostering and by the further focus on improving the baseline substantive staffing levels which will enable the required flexibility of staffing.

The ongoing action plan is included at Appendix 3 detailing the recommendations and the UHS compliance position and actions in progress.

2.2.4 In October 2018 NHS Improvement published ‘Developing Workforce Safeguards’ guidance which sets out to support providers to deliver high quality care through safe and effective staffing. It includes many of the actions identified in both the NICE guidance and the National Quality Board recommendations broadened to all staff groups.
2.3 **6 monthly Ward Staffing review August – October 2019 – Outcomes**

2.3.1 The 6 monthly review was carried out from August 2019 – October 2019 with initial review meetings taking place with each Division (attended by DHN, Matrons, Ward Leaders, Finance representatives, workforce representatives and facilitated by the Deputy Director of Nursing & Education and Workforce). The same triangulated methodology was used as in previous reviews. An update on the latest guidance and reporting requirements in relation to staffing were also included in the divisional review meetings.

2.3.2 The detailed spreadsheet with ward by ward findings is included at Appendix 4. This provides information on the current establishment data broken down by shift and assessing against registered/unregistered ratios; CHPPD; nurse to patient ratios by registered and total nurse staffing considering acuity information from the Safer Nursing Care Tool (SNCT acuity tool – where appropriate). It should be noted that a number of rostering template reviews were instigated as a result of the discussions so some figures will have changed for individual wards since the review.

2.3.3 **Nurse to patient ratios by registered and total nursing**

- The ward establishments across UHS allow for registered nurse to patient ratios during the day to range from 1:2 (Piam Brown) to 1:11 depending on specialty and overall staffing model. The average level set to achieve 1:3 to 1:8 registered nurse to patient ratio in most areas during the day with the majority (39) set between 1:4 to 1:7. Exceptions are where there is a planned model of trained band 4 staff and is particularly evident in Medicine and Medicine for older people.

- The areas on or above 1:7 are some medicine wards, Medicine for Older People (MOP) wards, F2, the Acute Stroke Unit and Bramshaw. These areas include a higher ratio of band 2 to 4 staff creating a total nurse to patient ratio of 1:3 – 1:4. It should be noted that the ratio of patients to registered nurse can regularly increase when wards are not fully established.

- Planned staffing ratios at night require constant oversight to ensure the model is sufficient to provide the required support for patients out of hours. Following previous reviews there are now fewer areas with ratios higher than 1:11 (RN to patient) at night. The exceptions are MOP, Bramshaw, E3, D6 and D8 where the ratios rise to 1:12 – 1:14. In these areas, however, this is offset by an average total nurse to patient ratio of 1:6 and utilisation of planned band 2 or band 4 models.

2.3.4 **Registered to unregistered ratios**

- UHS ward areas were reviewed against the benchmark of 60:40 registered to unregistered ratios as the level to which ward establishments should not fall below unless planned as the model of care.

- 19 wards are now established at between 60:40 and 70:30.

- 25 wards (down from 30 last year) are below the 60:40 ratio where they are utilising band 4 staff as an appropriate contribution to the model of care and where there is a wider multidisciplinary team contributing to care (e.g. MOP, T & O, Acute Stroke). Further work is being undertaken (in line with NQB recommendations) to look at integrated staffing plans and rosters to more accurately capture the contribution and opportunities of developing wider multi-disciplinary teams.

- 8 wards are above the 70:30 ratio reflecting the increased specialism of our regional specialties where the intensity of the patient needs requires a higher ratio of registered staff (Paediatric, Neurosciences, Cardiac and Cancer Care areas).

- The support of band 4 roles continues to be designed in as part of a model of care in a number of areas and this has continued to accelerate in 2019 linked to the further development of apprenticeship opportunities. This has also provided a role in which
to appoint the first cohort of nursing associates who qualified and registered with the NMC from January 2019. In many areas where the acuity and intensity of patients has increased and treatment and medication regimes are complex, further reduction in the overall skill-mix of registered to unregistered staff is not appropriate to maintain safe staffing levels and ensure adequate supervision.

- Focus will continue on reviewing the overall registered to unregistered ratios to ensure reductions are linked to planned model of care changes and are accompanied by appropriate quality impact assessment and evaluation.

### 2.3.5 Assessment against the Safer Nursing Care Tool (acuity/dependency model)

- The Safer Nursing Care Tool (acuity/dependency model) has been used to model required staffing based on the national recommended nurse to patient ratios for each category of patient in all of the adult areas. This is now integrated into the health roster system as part of the safe care tool and provides information on acuity/dependency levels and corresponding staffing levels on a real-time basis converted into recommended care hours per patient day. Where the predicted levels differ from established numbers, professional judgement has been used to assure that the levels set are appropriate for the speciality and number of beds.

### 2.3.6 Care Hours Per Patient Day

- Planned total Care Hours Per Patient Day (CHPPD) range from 5.0 (ASU) – 13.5 (Piam Brown) and average at 7.1. This is the same figure as last year.

- Registered care hours per patient day range from 2.1 (G5, G8) - 13.1 (Piam Brown) and average at 4.4. This is a lower level than last year.

- Unregistered care hours per patient day range from 0 (G2 Neuro) – 5.8 (G7) and average at 2.8. This is slightly higher than last year and offsets the reductions in the registered nurse level.

### 2.3.7 Allowance for additional headroom requirements and supervisory ward leader model

- All areas have 23% funding allocated to allow for additional headroom requirements arising from non-direct care time.

- In many areas these levels are being exceeded and a detailed project has been implemented, led by the workforce systems rostering team, to work with the care groups to ensure they are managing their headroom appropriately and to make recommendations around better corporate management of some headroom areas (e.g. parenting).

- A discussion around management of headroom was included in each of the ward staffing reviews which took place with clear actions for the ward leaders to implement.

- The headroom allowance within the ward budgets includes funding to enable the Ward Leaders to be supervisory and additional to required staffing numbers. This model was supported financially by Trust Board several years ago. It should be noted that the ongoing position with vacancies has resulted in those Ward Leaders with supervisory status regularly working as part of the baseline numbers. Full benefits of the supervisory model will not be realised until substantive staffing levels improve but the model has continued to support the achievement of patient experience and safety outcomes at ward level, the targeted reduction in temporary staffing usage as well as supporting the high volume of junior staff requiring supervision appointed via recruitment campaigns.
2.3.8  **Specific Divisional issues emerging**
Specific Divisional issues highlighted in the review are contained in Appendix 5.

2.4  **Trust wide risks and issues considered in the review**

2.4.1  **Increasing patient acuity/dependency**
The development of our defining services continues to result in an evidenced increase in the complexity, acuity and dependency of the patients cared for in our general ward beds.

Information on the acuity and dependency of our patients, including any enhanced care needs is now available via the ‘Safe Care’ functionality in health roster and is used in real time as part of our daily staffing meetings. The information is also now used at the 6 monthly reviews as part of the professional judgment assessment.

2.4.2  **Increasing enhanced care needs**
The introduction of ‘safe care’ as part of the eRostering system has allowed a more accurate capture of the acuity and dependency of patients which now includes any additional enhanced care needs (previously known as specialling) in real-time. This enables the Trust to have a better overview of the enhanced care requirements and the Trust wide priorities.

Trust wide we continue to see an increase in the complexity of patients particularly in relation to mental health needs including dementia and patients remaining in the acute settings for prolonged lengths of time whilst awaiting appropriate placements.

This is having an impact on the ability to support the additional enhanced care needs that arise for this group of patients particularly across key specialties (MOP, Medicine, Child Health, Neurosciences and T & O).

The Trustwide service model for enhanced care has now been restructured. Division B have retained the overall review and advice service, supporting clinical areas in their decision making around the need for additional support. Each division has then developed a local pool of staff to deploy to support these needs. Ward leaders reported that this has made a major difference to the management of patients with these enhanced needs and has reduced the reliance on last minute agency to support.

The numbers however remain unpredictable and are therefore managed in real-time as part of overall considerations around safe staffing.

2.4.3  **Supervising and supporting the junior workforce**
The professional judgement discussions with all of the Ward Leaders again highlighted the additional challenges posed to the staffing models of appropriately supervising and supporting the increasing range of learners having placements on the ward areas. This includes the ability to meet the supervisory standards with an increasingly junior workforce.

The robust retention and recruitment strategies across the Trust and the strong vision to ‘grow our own’ nurses for the future means that wards are supporting a range of learners including undergraduate students, trainee nursing associates, nurse degree apprentices Return to Practice students, newly qualified staff undergoing preceptorship and increasing numbers of overseas nurses awaiting registration.

Education teams across the trust are key to supporting the development and learning into the wards and particularly in training and supporting the overseas nurses to full registration.
2.4.4 **Vacancies**

Total reported nursing vacancies (registered and unregistered) across the inpatient areas at the time of the staffing review (August 2019) were running at 405 (12.5%) with registered nurse vacancies at 371 (18.1%) and unregistered at 18 (1.8%), this is a lower level than in the previous annual review. Information about vacancies and the ongoing actions being taken to reduce these is detailed in the monthly staffing reports to TEC and Trust Board. It should, however, be noted that the establishment review and outcomes around planned staffing levels are set against this backdrop of vacancies.

The day to day management of staffing to match actual staff available to the established staffing levels continues to be a challenge for all of the clinical areas and was again highlighted by the ward leaders at the staffing review meetings. This was particularly evident for areas trying to manage additional capacity challenges (e.g. E7 for cardiovascular). A range of safeguarding and escalation actions are in place to continuously maintain and balance staffing to assure minimum safe staffing levels.

A key action corporately and for all Divisions in 2019/20 is to continue to concentrate efforts to fill these vacancies and these efforts are reaping benefits with a gradually reducing vacancy position.

Detailed work continues on the implementation of a range of retention and recruitment initiatives in partnership with the HR resourcing team to increase substantive staffing and reduce the baseline vacancies.

To offset some of the challenges of an elevated vacancy rate for RN, all areas have maintained the increased level of supervisory band 6 roles to ensure there is a more senior presence. This is also having a positive impact on the retention of skilled nurses within the clinical ward areas with increased opportunities for career progression available.

2.4.5 **Review of quality metrics**

The NICE guidance outlines some key quality metrics that should be considered as part of the staffing reviews. The safety metrics defined are patient falls, pressure ulcers and medicine administration errors. These metrics, along with a range of other UHS defined quality indicators are already monitored through our internal clinical quality dashboard and are discussed ward by ward as part of the professional judgement methodology in the reviews.

3.0 **Conclusion**

3.1 Divisional requirements for staffing changes noted within the report to be presented through the budget setting process.

3.2 Continued implementation of the agreed actions to ensure compliance and adoption of the NQB, NICE and NHSi guidance on safe, sustainable and productive staffing.

3.3 Continued focus on monitoring the real-time staffing position (actual) against the planned (establishment), matched to acuity/dependency levels as part of the established processes utilising the functionality provided by ‘safecare’ and healthroster.

3.4 Systematic ward staffing reviews to be reported to board annually, with 6 monthly light touch reviews reported through Divisional Boards. Next full staffing review to be presented to Trust Board in November 2020.
4.0 **Recommendation**

4.1 To note findings of this annual ward establishment review and the Trust position in relation to adherence to the monitored metrics on nurse staffing levels, specifically:

- UHS nursing establishments are set to achieve an average 1:3 to 1:8 registered nurse to patient ratio in the majority of areas during the day with the majority (39) set between 1:4 to 1:7. Exceptions are where there is a planned model of trained band 4 staff and is particularly evident in Medicine and Medicine for older people.
- The majority of wards (28) are staffed at between 50:50 and 70:30 registered/unregistered AWL ratio or above. Those wards with lower ratios (16 wards) are linked to the systematic and evaluated implementation of trained band 4 staff where appropriate.
- Planned total Care Hours Per Patient Day (CHPPD) range from 5.0 – 13.5 and average at 7.1.

4.2 To note the ongoing progress in UHS compliance with the guidance from the National Quality Board on safe, sustainable and productive staffing.

4.3 To note the ongoing progress in UHS compliance with the NICE guideline on safe staffing for nursing in adult inpatient wards.

4.4 To note and acknowledge the ongoing risks and challenges of matching actual staffing to established staffing levels due to the current vacancy position.

4.5 To continue the Trust wide commitment and momentum on actions to fill vacancies and further reduce the reliance on high cost agency against the backdrop of agency controls from NHS Improvement.

4.6 To discuss the report at TEC and Trust Board as an ongoing requirement of the National Quality Board and developing workforce safeguards guidance around safe staffing assurance.

5.0 **Appendices**

Appendix 1: National Quality Board (NQB Expectations for safe staffing Safe, Sustainable and productive staffing

Appendix 2: NQB Safe Staffing Recommendations – UHS action plan

Appendix 3: NICE Guideline 1: Safe Staffing for nursing in adult inpatient wards in acute hospitals - UHS action plan

Appendix 4: Ward by Ward staffing review metrics spreadsheet

Appendix 5: Specific Divisional issues emerging
# National Quality Board Expectations for safe staffing

**Safe, Sustainable and productive staffing (July 2016)**

| Expectation 1: Right staff | Boards should ensure there is sufficient and sustainable staffing capacity and capability to provide safe and effective care to patients at all times, across all care settings in NHS provider organisations.  
Boards should ensure there is an annual strategic staffing review, with evidence that this is developed using a triangulated approach (i.e. the use of evidence-based tools, professional judgement and comparison with peers), which takes account of all healthcare professional groups and is in line with financial plans.  
This should be followed with a comprehensive staffing report to the board after six months to ensure workforce plans are still appropriate.  
There should also be a review following any service change or where quality or workforce concerns are identified.  
Safe staffing is a fundamental part of good quality care, and CQC will therefore always include a focus on staffing in the inspection frameworks for NHS provider organisations.  
Commissioners should actively seek to assure themselves that providers have sufficient care staffing capacity and capability, and to monitor outcomes and quality standards, using information that providers supply under the NHS Standard Contract. |
| --- | --- |
| **Expectation 2: Right skills** | Boards should ensure clinical leaders and managers are appropriately developed and supported to deliver high quality, efficient services, and there is a staffing resource that reflects a multi professional team approach.  
Decisions about staffing should be based on delivering safe, sustainable and productive services.  
Clinical leaders should use the competencies of the existing workforce to the full, further developing and introducing new roles as appropriate to their skills and expertise, where there is an identified need or skills gap. |
| **Expectation 3: Right place and time** | Boards should ensure staff are deployed in ways that ensure patients receive the right care, first time, in the right setting. This will include effective management and rostering of staff with clear escalation policies, from local service delivery to reporting at board, if concerns arise.  
Directors of nursing, medical directors, directors of finance and directors of workforce should take a collective leadership role in ensuring clinical workforce planning forecasts reflect the organisation’s service vision and plan, while supporting the development of a flexible workforce able to respond effectively to future patient care needs and expectations. |

2.1 Mandatory training, development and education

2.1.1 Frontline clinical leaders and managers are empowered and have the necessary skills to make judgements about staffing and assess their impact, using the triangulated approach outlined in this document.

2.1.2 Staffing establishments take account of the need to allow clinical staff the time to undertake mandatory training and continuous professional development, including development of knowledge, skills, and attributes, and to undertake mandatory training, including the support of pre-registration and undergraduate students.

2.1.3 Those with management responsibilities ensure that staff are managed effectively, with clear objectives, constructive approaches, and support to enable and maintain professional development.

2.1.4 The organisation analyses training needs and uses this analysis to help identify, build and maximise the skills of staff. This forms part of the organisational training and development strategy, which also aligns with Health Education England’s quality framework.

2.1.5 The workforce has the right competencies to support new models of care. Staff receive appropriate education and training to enable them to work more effectively in different care settings and in different ways. The organisation makes realistic assessments of the time commitment required to undertake the necessary education and training to support changes in models of care.

2.1.6 The organisation recognises that delivery of high-quality care depends upon strong and clear clinical leadership and well-led and motivated staff. The organisation allocates significant time for team leaders, professional leads and lead clinical change teams/ward managers to discharge their supervisory responsibilities and have sufficient time to coordinate activity in the care environment, manage and support staff, and ensure standards are maintained.

2.1.7 The organisation demonstrates a commitment to investing in new roles and skill sets that will enable nursing and midwifery staff to spend more time using their special skills to focus on clinical duties and decisions about patient care.

2.1.8 The organisation recognises the unique contribution of nurses, midwives and all care professionals in the wider workforce. Professional judgement is used to ensure that the team has the skills and knowledge required to provide high-quality care for patients. This stronger multiprofessional approach avoids placing demands solely on any one profession and supports improvements in quality and productivity, as shown in the practice.

2.1.9 The organisation works collaboratively with others in the local health and care system. It supports the development of future care models by developing an adaptable and flexible workforce and enabling the wider workforce to work across care settings, care teams and care boundaries.

2.2 Working as a multiprofessional team

2.2.1 The organisation demonstrates a commitment to investing in new roles and skill sets that will enable nursing and midwifery staff to spend more time using their special skills to focus on clinical duties and decisions about patient care.

2.2.2 The organisation recognises the unique contribution of nurses, midwives and all care professionals in the wider workforce. Professional judgement is used to ensure that the team has the skills and knowledge required to provide high-quality care for patients. This stronger multiprofessional approach avoids placing demands solely on any one profession and supports improvements in quality and productivity, as shown in the practice.

2.2.3 The organisation recognises that delivery of high-quality care depends upon strong and clear clinical leadership and well-led and motivated staff. The organisation allocates significant time for team leaders, professional leads and lead clinical change teams/ward managers to discharge their supervisory responsibilities and have sufficient time to coordinate activity in the care environment, manage and support staff, and ensure standards are maintained.

2.2.4 The organisation demonstrates a commitment to investing in new roles and skill sets that will enable nursing and midwifery staff to spend more time using their special skills to focus on clinical duties and decisions about patient care.

2.2.5 The organisation recognises the unique contribution of nurses, midwives and all care professionals in the wider workforce. Professional judgement is used to ensure that the team has the skills and knowledge required to provide high-quality care for patients. This stronger multiprofessional approach avoids placing demands solely on any one profession and supports improvements in quality and productivity, as shown in the practice.

2.3 Workplaces and Health and Safety

2.3.1 The organisation demonstrates a commitment to investing in new roles and skill sets that will enable nursing and midwifery staff to spend more time using their special skills to focus on clinical duties and decisions about patient care.

2.3.2 The organisation recognises the unique contribution of nurses, midwives and all care professionals in the wider workforce. Professional judgement is used to ensure that the team has the skills and knowledge required to provide high-quality care for patients. This stronger multiprofessional approach avoids placing demands solely on any one profession and supports improvements in quality and productivity, as shown in the practice.
### 2.3 Recruitment and retention

<table>

**Assessing if nursing staff available on the day meet patients’ nursing needs** - Recommendations for registered nurses on wards who are in charge of shifts

1.2.2 Use a decision support toolkit endorsed by NICE to determine nursing staff requirements

- Not yet available through NICE but UHS already uses nationally validated Safe Nursing Care Tool (SNCT) as part of methodology for reviewing staffing levels

- Review NICE endorsed tools as they emerge

- Await national development

- DDoN

- C

- Review NICE endorsed tools as they emerge. Continue to use endorsed SNCT and incorporate into plan for v10 eRostering safe care module rollout.

1.2.3 Use informed professional judgement to make a final assessment of nursing staff requirements

- Professional judgement used as mainstay of methodology for reviewing establishments and daily to day staffing

- Maintain DDoN/Matrons/Ward Leaders

- C

- Continue to support staff at local ward level to understand establishments and staffing models

1.2.4 Consider using nursing care activities included in guidance as a prompt to help inform professional judgement (see separate tab)

- Already considered routinely as part of professional judgement and methodology

- Maintain DDoN/Matrons/Ward Leaders

- C

- Continue to support staff at local ward level to understand establishments and staffing models

1.3.1 Setting ward establishments - Recommendations for senior registered nurses responsible for determining nursing staff requirements or those involved in setting the nursing staff establishment of a particular ward

- Ward sisters already involved in ward establishment reviews but approach needs strengthening. Competency for establishment review included in ward leader competencies

- Maintain DDoN/Matrons/Ward Leaders

- C

- Strengthen involvement and training of ward leaders and other nurses through staffing master classes

- Maintain DDoN/CHN/Workforce System

- C

- Current staffing review has full representation from ward leaders

1.3.2 Routinely measure the average amount of nursing time required throughout a 24 hour period for each patient expressed as nursing hours per patient.

- Methodologies not previously based on nursing hours per patient but safe nursing care tool and professional judgement

- Maintain DDoN/CHN/Workforce System

- C

- Include nursing hours per patient as a methodology in the staffing reviews from November 2014

- Maintain DDoN/CHN/Workforce System

- C

- Care hours per patient day now embedded as part of monthly reporting and included in safe care module of eRoster. Used as part of 6 monthly review from July 2016

1.3.3 Formally analyse the average nursing hours required per patient at least twice a year when reviewing the ward nursing staff establishments.

- Methodologies not previously based on nursing hours per patient but safe nursing care tool and professional judgement

- Maintain DDoN/CHN/Workforce System

Appendix 5

Specific Divisional issues emerging

Division A

Overall established staffing levels are appropriate in the majority of wards for the level and acuity of patients.

Cancer Care has undergone major change over the last few years as the care delivery models have moved to more day case and assessment and a higher intensity of care in the remaining inpatient areas. Staffing levels have been gradually adjusted to match these changes. The daycase and outpatient areas are under significant pressure and a review is underway of pathways and models of care.

Further review is taking place to ensure the staffing model for F11 (intestinal failure unit) meets the required national recommendations for this specialty. Acuity and Dependency levels are being closely monitored as part of this review.

Areas being prioritised at budget setting:
No specific ward staffing areas are being prioritised for budget setting.

Division B

Overall established staffing levels are appropriate for the level and acuity of patients with previous investments.

The Division has continued to expand the band 4 model within the MOP wards and this has now rolled out and been well evaluated in the medical wards and AMU.

A range of innovative shift patterns including twilights is being utilised to ensure care hours are focussed at the times of greatest patient need.

It should be noted that Medicine and MOP are now at the lower end of the recommended staffing levels and any further change to the skill-mix should be carefully considered and accompanied by a full quality impact assessment.

Areas being prioritised at budget setting:
No specific ward staffing areas are being prioritised for budget setting.

Division C (excluding Midwifery)

Overall established staffing levels are appropriate in the majority of wards for the level and acuity of patients.

Safe, sustainable and productive staffing - An Improvement Resource for Children and Young People’s Inpatient Wards in Acute Hospitals was published in June 2018 and is used to monitor staffing establishments for children.
The Children’s Hospital currently does not have a model for a supernumerary bed manager/professional bleep holder out of hours. Both roles (predominantly covering flow and staffing) are managed by a band 6 sister who has a clinical patient allocation as part of the establishment numbers. The out of hours bleep role oversees 100 paediatric beds and supports flow from the Children’s ED, Paediatric short stay (based within ED), Paediatric Intensive Care Unit (PICU) and other hospitals. They also support and oversee staffing for 8 inpatient wards as well as John Atwell Day Ward and PICU.

The increasing acuity following a change in the emergency patient pathway, arising from transfer of the Paediatric Assessment Unit to ED have presented capacity challenges and the reducing skill mix are putting additional requirements on the bleep holder/bed manager who can often not be released from practice to support.

**Areas being prioritised at budget setting:**

No specific ward staffing areas are being prioritised for budget setting.

The division will be presenting a case to support supernumerary bleep holders at night.

**Division D**

Overall established staffing levels are appropriate for the level and acuity of patients with previous investments and ongoing reconfigurations in T & O, Neurosciences and CVT.

Additional pressures on staffing models, however, have arisen in areas where the pathways of care and theatre activity has increased and this was particularly noted in CVT where additional beds were being supported during the review requiring a dispersal of staff. CVT will be monitored closely and the next review of establishment will be carried out sooner if these pressures continue to rise.

Division D do not have a model which allows the bleep holder to be supernumerary at night. The increasing acuity of the patients, increasing capacity challenges and reducing skill mix are putting additional requirements on the bleep holder who can often not be released from practice to support.

**Areas being prioritised at budget setting:**

No specific ward staffing areas are being prioritised for budget setting.

The division will be presenting a case to support supernumerary bleep holders at night.

It should be noted that whilst the establishment levels across the Trust overall achieve the recommended nursing metrics – ongoing challenges with recruitment impact on the ability to achieve these ratios fully on a shift by shift basis.
Report to Trust Board of Directors dated Thursday, 28 November 2019

Title: 2019/20 Influenza Vaccination Programme

Category | Quality, Performance, and Finance
---|---
Agenda item | 4.7
Sponsor | Chief Executive
Author | Steve Harris - Director of Human Resources, Dr Julia Smedley - Occupational Health Lead
Provenance | Influenza planning discussed within Health and Wellbeing Group and within Flu team. Update previously given in September CEO report to Trust Board.
Classification | This Report is unclassified.

Purpose

- Influenza vaccination plays an important part in our winter resilience as an organisation to protect staff, patients and service users.
- On 17 September 2019, NHSi wrote to all provider organisations setting out its expectations for vaccination performance for the 19/20 campaign. There is a greater regulatory focus on influenza vaccination this year, as part of winter planning scrutiny.
- This report summarises the methods and outcome of the winter 2018/19 staff influenza vaccination campaign, and the lessons and implications for the 2019/20 programme.
- Trust Executive committee has provided its support for the plans. NHSi require provider organisations to publish their self-assessment and preparedness by 31 December 2019, in open Trust Board Papers.
- This report is for information for Trust Board. Board is asked to note the contents of the report, the issues with supply, and the actions being taken to drive up vaccination levels.

Relevant strategic goals

- Goal 1: Improving patient journeys.
- Goal 2: Delivering value-based health and care.
- Goal 3: Supporting healthy lives.
- Goal 4: Building an expert and inclusive workforce.
- Goal 5: Being agile in meeting people’s needs.
- Goal 6: Creating leading-edge research, education, and innovation.

Assurance framework links

- BAF05 – Capacity and capability gaps in the workforce lead to an inability to provide safe and timely care

Impact assessments

- Adjustments made within OH for those in significant risk groups to prioritise vaccine provision, and or adjustments to method of delivery and type of vaccine where issues of allergy arise.

Other standards affected

- CQC Well lead domain.
- NHSI use of resources assessment - use of workforce resources.
- NHSI regulatory assessment of winter preparedness.
Introduction and Purpose:

1.1 Influenza vaccination plays an important part in our winter resilience as an organisation to protect staff, patients and service users.

1.2 On 17 September 2019, NHSi wrote to all provider organisations setting out its expectations for vaccination performance for the 19/20 campaign. There is a greater regulatory focus on influenza vaccination this year, as part of winter planning scrutiny.

1.3 This report summarises the methods and outcome of the winter 2018/19 staff influenza vaccination campaign, and the lessons and implications for the 2019/20 programme.

1.4 NHSi require provider organisations to publish their self-assessment and preparedness by 31 December 2019, in open Trust Board Papers. This report is for information for Trust Board.

Targets:

2.1 Target for influenza vaccine uptake in front line staff was 70% for full CQUIN payment in 2018/19.

2.2 The target uptake for full CQUIN payment is 80% in 2019/20. NHSi have assessed Trusts in the lowest quartile as being poor performers. Whilst UHS is above the lowest quartile and regarded as one of the higher performers in the region, the regulator has expressed its desire for us to achieve above 80%. This represents a significant increase from last year.

Reviewing performance at UHS:

3.1 Performance has improved annually at UHS over the last 4 years, shown below. Last year, UHS achieved its highest total. Uptake by care group is shown in Appendix A. Lessons learned are included in Appendix B.

3.2 75% of the available CQUIN payment (£193,000) was achieved last year. The vaccine was readily accessible, but a significant proportion of staff chose to decline. This year the CQUIN payment is likely to be greater, as the number of elements dividing the Health and Wellbeing payment have been simplified (reduced). Full flu CQUIN payment is likely to be of the order of £800,000.
4 Key components - UHS influenza campaign for 2019 winter:

4.1 The full assessment against the NHSi recommended best practice is included in Appendix B. It assesses our performance last year, identifies lessons learned, and outlines our plans for this year. UHS has already taken many of the steps being recommended by NHSi.

4.2 UHS is compliant with the best practice recommendations from NHSi.

4.3 To incentivise staff, a free cup of Paddy and Scott's coffee is available from the SGH Feast Restaurant for every member of staff who receives the vaccine. In addition, a prize draw has been set up to offer a Sonos speaker at random to a vaccinated member of staff.

4.4 Occupational Health (OH) have trained a cohort of 124 peer vaccinators, who are running local clinics in wards and clinical departments. They are enabled to influence uptake through local education. Occupational Health have set up a similar database to last year, which will track uptake down to Care Group (and in most cases, department level). This is now being issued weekly to TEC members and Divisions.

4.5 A Flu team has been set up, and meets monthly (first meeting was on 29 October 19), comprising of representatives from Divisional Management teams and staff groups. The communications team is working on a strategy, which will keep the flu vaccination programme featuring prominently on a number of the Trust’s media platforms, throughout October, and ongoing until January 2020.

4.6 Data on uptake by Care Group for 2018/19 is provided in Appendix A. Uptake in front line staff varies, with some areas achieving over 70%.

4.7 The OH team have worked hard to ensure that vaccine access is widely available from the following sources:

- Directly from OH during core hours, including vaccinators going to staff who have phoned for the vaccine.
- From pop up local clinics being organised via peer vaccinators.
- Ward and clinical area walk arounds by OH and peer vaccinators.
- At induction for all new starters.
- At Core Brief.
- From pop up clinics at the Main Entrance.
- At November and December Board, and Trust Executive Committee.
- Peer vaccinators have been trained at RSH and PAH.

5 Issues to date and risks:

5.1 Vaccine Supply:

5.1.1 There has been an issue with the vaccine supply this year, which has resulted in intermittent shortages or lack of stock to enable staff vaccination. This has hampered the programme.

5.1.2 The supplier Sanofi-Pasteur, which provides stock to a number of Trusts, has recently confirmed that full vaccination supplies are available. However, the disruption resulted in two separate spells of uncertain or delayed delivery, in total 20 lost days for the campaign. During this time, clinical staff were prioritised, and some staff were turned away having attended clinics to receive their vaccination.

5.1.3 Vaccination levels have significantly increased since receipt of the full vaccine order. Uptake as of 19.11.19 is 54%. This is close (within 1%) to where it normally is at this point in the year. **NB:** Appendix A describes the position as at 15 November 2019.
5.2 Resistance to receiving the vaccine:

5.2.1 There is still a significant level of resistance to uptake amongst staff, mainly due to fear about side effects. This is despite major efforts at myth busting (including videos and other media), and using peer champions to give positive messages about vaccine safety. The small minority of approximately 30% of front line staff who decline are difficult to influence, and significant improvement on 70% uptake will be a challenge. The residual levels of resistance to receiving the vaccine means that the achievement of 80% uptake (to achieve the full CQUIN payment) is a risk.

5.2.2 During 2018/19, Dr Julia Smedley spent significant personal time (over 28 hours) meeting with clinical departments and talking with clinicians who refused to receive the vaccine. This did result in some marginal gains, but at the expense of OH manpower for other activities.

5.2.3 Occupational Health will run an anonymised survey to all staff for whom we do not have a record of flu vaccination status at the end of the season (January 2020) asking for their reasons for declining.

6 Required action:

Board is asked to note the contents of the report, the issues with supply, and the actions being taken to drive up vaccination levels.
### Appendix A: Flu vaccine uptake by Care Group - Final 2019 positions and 19/20 performance to date:

<td>Flu vaccination programme and access to vaccination on induction programmes.</td>
</tr>
</tbody>
</table>
| B5 | Programme to be publicised on screensavers, posters and social media. | Underway | The Communications department are currently finalising a communications plan for the vaccination campaign. It will comprise:  
- Keep the influenza vaccination programme on the Staffnet front page at all times from October to February inclusive. The appearance and content will be revised regularly.  
- Single click link to comprehensive flu vaccination pages from the Staffnet front page.  
- Flu vaccination will feature in every Core Brief from October to February.  
- Regular flu vaccination updates will be posted on Workplace (internal Facebook page) and weekly staff briefings. |
| B6 | Weekly feedback on percentage uptake for directorates, teams and professional groups. | Underway | A weekly graphic of uptake (syringe graphic) will be on the front page of Staffnet.  
Weekly reports will be provided by occupational health from October onwards to  
- TEC split by Division and professional group.  
- Divisional Management teams and Care Group leads split by Care Group and professional group. |
## Flexible accessibility:

| C1 | Peer vaccinators, ideally at least one in each clinical area to be: identified, trained, empowered and released to vaccinate. | Complete | A cohort of 124 peer vaccinators have been trained to deliver local vaccination sessions, and individual vaccination appointments directly on wards and departments.

Vaccinators have been trained in the governance and logistics of vaccine delivery, as well as the key messages and communications for the campaign. This year’s training included training on how to influence staff to take up the vaccine, and how to have difficult conversations with decliners.

All peer vaccinators have had their managers’ approval to attend training and to deliver the vaccine in work time. |

| C2 | Schedule for easy access drop in clinics agreed. | Complete | Open access is available through Occupational Health, with booked appointments on request - this will be advertised widely through Staffnet and Core Brief.

Peer vaccinators will advertise their sessions locally. |

| C3 | Schedule for 24 hour mobile vaccinations to be agreed. | Underway | Occupational health nurses will run some scheduled sessions for night staff. Peer vaccinators are also available on night shifts. |

## Incentives:

| D1 | Board to agree on incentives and how to publicise. | Complete | Badges have been delivered ready for the campaign.

Arrangements have been made to offer a free cup of coffee (voucher) for each member of staff who takes up a flu vaccine. |

| D2 | Success to be celebrated weekly. | Underway | Uptake will be published and celebrated weekly on Staffnet.

The carousel on the front page of Staffnet will include a topic on and positive feedback on flu vaccination every week. |
# Informatics Update for review

**Report to the Trust Board of Directors dated Thursday, 28 November 2019**

**Title:** Informatics Report  
**Category:** Quality, Performance, and Finance  
**Agenda item:** 4.8  
**Sponsor:** Director of Transformation and Improvement  
**Author:** Adrian Byrne, Director of Informatics  
**Provenance:** Report to Board  
**Classification:** This Report is unclassified.

**Purpose**  
The paper is presented for REVIEW. This is bi-monthly report on progress with informatics programme, regularly reported due to breadth of projects and impact on the business.

**Relevant strategic goals**

**Assurance framework links**

- BAF01 – Inability to develop partnerships and redesign services innovatively renders the Trust unable to meet the expectations of the NHS long term plan, our strategic plan, and sustainable elective and non-elective pathways  
- BAF02 – Failure to deliver regulatory requirements causes the Trust to breach the terms of its Provider Licence leading to a loss of local leadership due to an enforced change in Board and Executive composition, impacting on Goals 1 to 6  
- BAF03 – Failure to achieve financial targets results in a shortfall in cash required to deliver the capital programme  
- BAF04 – Reduced access to resources compromises the quality of services  
- BAF06 – Lack of capacity and agility renders the Trust unable to respond to the changing operating environment, causing a failure to provide contracted services  
- BAF09 – Failure to respond with the necessary organisational changes in design and operation renders the Trust unable to remain a competent NHS Provider

**Impact assessments**

n/a

**Other standards affected**

n/a
1. Overview

1.1. I am pleased to report that the Trust digital Strategy was supported by the Trust Board in September 2019. This supports the Trust clinical strategy and Strategic Plan. The new strategy will:

- Reduce burden on staff so they can focus on patients
- Provide patient access to digital tools to enhance their care
- Provide safe and easy access to clinical information
- Improve patient safety and care
- Increase trust efficiency and productivity

The Informatics team will now be bringing forward supporting strategy components and associated business cases for delivery. Michael Kiuber [as deputy CCIO] has also agreed to prepare an AI strategy which will be an important part of how we work in the future. It is hoped to secure more national funding to support the work post GDE programme.

1.2. A full communications plan is being prepared including an updated website. The digital team would welcome any opportunity to present to divisional/care group teams.

1.3. The three CCIOs (Mike Celinski and Ashwin Pinto with Michael Kiuber as deputy) are now settling in and have been out and about meeting teams. Their first task is to ensure there is a robust, transparent and open process for prioritisation of projects. This is linked to the development of CHARTs (our electronic patient record). They plan to present the process and outcome at December’s Digital Board for approval.

1.4. The CCIOs are including Digital in the MedBite programme and will be on future agendas.

1.5. A significant element of the current strategy is to increase digital maturity as a part of the Global Digital Exemplar (GDE) programme, achievement will be measured against the HIMSS EMRAM [model]. This is a measure of a paperless organization in line with overall national objectives (see PHC 2020 and NHS long term plan [Chapter 5]). The trust is receiving £10m of national funding contributing to this and has committed to a set of associated projects. The final 2 payments (equal to £2.5m) are contingent on the delivery of the programme and achievement of HIMSS level 7 equivalence. The meeting with NHS Digital took place on 8th Oct and an initial report has been received. While this is reviewed and followed up, the next round of funding has been delayed and will not happen until at least the new year (January)

1.6. The trust IT programme is juggling priorities with the HIMSS objective impacting work that has been commissioned by the junior doctor working group.

1.7. Post the GDE programme, consideration needs to be given to how the IT estate is treated as a business as usual environment with suitable technology refresh. During the three year [GDE] programme significant capital has been used to bring the desktop environment up to a reasonable state. The IT team are looking at options including managed services and refurbishment, but these will involve a switch to revenue funding for what was previously “lumps” of capital. A paper laying out the options will be presented to the digital board.

1.8. My Medical Record was awarded the Technology to Shout About award at Health Tech Awards 2019 and was winner of the Innovation in Digital Services award from the Multiple Sclerosis Trust. Meanwhile it continues to grow significantly and has around 30,000 registered users. Transactional services with those are planned in coming months.

1.9. Previously the user feedback surveys and ARCH collaborative review have been discussed. It is recognised that it is important to receive digital user feedback. Unfortunately due to other pressure this review has not yet been undertaken but this will take place before the end of the financial year.

1.10. We need your support to help the Trust get ready for this level of change. In particular every person working in the ward environment will change the way they record new information and access historical information.
2. Analysis and Discussion

Work this quarter:

2.1. We can see the impact already of having control of development through the acquisition of HICSS. A common complaint of slow loading has been addressed. Initial load of 17s has been cut to 4s on standard PCs.

2.2. Discussions are ongoing on the potential support of others using HICSS applications with this looking to be a promising development.

Future Work:

2.3. In 2020/21 we will continue the roll out of:

- Systems that reduce the chance of patients being lost to their next step. This is a major safety risk for any patient as an IP or as an OP. We are rolling out e grading and eTCI. This reduces the chance of data being lost between departments and ensures we have one digital record allowing us to ensure patients receive timely care.
- Systems that help us meet constitutional standards. We have new waiting list tools for Cancer and RTT and well as real time app based reporting on the 4 hour target. We have developed a new ‘whiteboard’ for Histopathology so they can see when the patients Cancer MDT is scheduled. We have a written a new view on the Somerset Cancer System significantly reducing MDT prep time and smoothing the running of the MDT. Doctors can now review their own waiting lists with a direct link to CHARTS. Work will continue in this area.
- Systems that improve productivity and improve clarity of communication. The new patient discharge summary, virtual clinics through attend anywhere and the virtual management of patients through My Medical Record. MedXnote will also keep improving and they are currently working on a voice activated chat-bot with Microsoft.
- Systems that improve the patient experience. This will include collecting patient related outcome measures through MyMR and creating a new OP interface through NetCall moving from paper patient letters to email and app-based content.

2.4. Over and above this we will be developing and rolling out:

- Digital noting in our inpatient areas.
- Closed loop prescribing.
- A new maternity system, we plan to go to market in Jan 2020, so this would be late in the year.
- A new business intelligence platform [currently being procured] to improve our real time reporting, our historic reporting and moving us into the world of predictive analytics.
- A new Lung Cancer Screening programme and new IT to support Virtual Clinics for patients with non specific symptoms.

2.5. Other large pieces of work are happening outside of the core programme

- Have a new contact for our PACS service. The procurement exercise is now complete as at Nov 2019
- We are bidding to replace our laboratory systems (LIMS) which is end of life.
- We are bidding to digitise our Histopathology dept with one of the National centres of excellence.

Other Risks and Issues

2.5 Risks in Microsoft and the licences plus the age of desktops mentioned in the previous report are still being worked upon. There is a significant potential cost pressure on Microsoft licenses.

3. Recommendation

3.1. To note the report and progress

- BAF04 – Reduced access to resources compromises the quality of services

**Impact assessments**

**Other standards affected**
Executive Summary:

In Month and Year to date Highlights:

1. In October 2019, the Trust delivered a surplus of £3.3m, £0.5m behind Plan. Year to date the Trust is reporting a £3.8m surplus which is £2.2m better than Plan. Under the single oversight framework, the Trust has delivered a score for Finance and Use of Resources of ‘1’.

2. When non-recurrent items are excluded the year to date position is a £0.8m surplus. Non-recurrent items include a reclaim of VAT paid on agency nursing invoices in 18/19.

3. In M7 budgets have been adjusted to align CIP budget reductions to identified schemes as discussed at S&FC. The net result is no change at Trust level; however, both pay and non-pay budgets have increased offset by an increase in income. Excluding the backdated impact of these adjustments, the main themes seen in M7 were:
   - Income was on Plan. Clinical income was strong as planned with both elective & non-elective estimated to over-perform including an offset for blended payment reduction for non-elective.
   - Pay was £0.6m worse than Plan in month mainly due to identified but undelivered CIP.
   - Total CIP delivery was £0.3m better than Plan at £4m for the month although this includes approximately £0.5m of backdated income CIP scheme award. Currently the Trust is £2.1m behind Plan year to date.

4. The cash position was £33.5m above Plan at £80m. The above Plan position has primarily been driven by:
   - I&E Position better than plan, and cash start point better than assumed at the time the cash plan was agreed
   - Additional PSF for 18/19 over and above that assumed at the point the Plan was finalised
   - Accounts Receivable position better than assumed in Plan

5. Looking forward to the end of 2019/20, the Trust is facing risks relating to:
   - CIP delivery
   - Underlying run-rate would not achieve Plan
   - Clinical income shortfall due to consultant workforce capacity relating to pensions taxation
   - The current forecast suggests a full year out-turn of a surplus (excl. PSF) in the range £1m - £6m, with the mostly likely outcome £3.5m, compared to the control total of £17m surplus. This position would result in non-achievement of PSF in Q4, and potentially Q3, which would restrict cash availability to support our 3-year capital programme.
Total clinical income was £1.7m worse than Plan, although the Plan was increased to reflect income CIP delivery in the month and service developments namely Theatre K & HHFT Radiotherapy transfer. These Plan adjustments had a backdated impact of approximately £0.9m.

The in month Plan for pay substantive (+£2.1m), other non-pay (+£3.2m) and other income (+£5.3m) includes a net neutral adjustment related to expected CIP delivery based on current CIP identification as opposed to an estimate at the start of the financial year. The variances described below are adjusted to remove the backdated impact.

Total pay was £0.6m over Plan in the month due to undelivered CIP in the main. Overall total pay spend was £0.2m higher than in September 2019 driven entirely by an increase substantive pay costs and the impact of NQNs.

Total non-pay excl. pass through drugs & devices was £0.8m underspent in the month due to lower than planned drug and clinical supplies expenditure.

Overall CIP delivery was £0.3m better than Plan with £4m delivered (approximately £0.5m backdated). See slide 12 for further detail.
These graphs show the actual underlying position was on Plan in the month and year to date.

It also shows an alternative presentation of the Plan phasing assuming that the £40m CIP target is delivered equally each month through the year.

All figures in these graphs exclude PSF including the amount received as a prior year adjustment.
This graph shows potential scenarios for 2019/20 out-turn, as shared with Trust Board as part of the 2019/20 planning process.

Currently the forecast is based on estimates post Q2, which includes 4 months of “final cut” income data.

The financial forecast is a range of:
- Best Case - £6m surplus
- Most Likely - £3.5m surplus
- Worst Case - £1m surplus

This incorporates uncertainties and risks in H2 relating to:
- Investment in ED to support 4 hour performance
- Investment in schemes to enhance winter flow
- Investment in additional bed capacity, expected to be fully off-set by income
- Investment in consultancy, expected to be fully off-set by income
- Risk of winter pressures on elective activity, particularly in Division D
- Commissioner payment challenges, particularly local non-elective activity
- CIP delivery
The bed state data for October 2019 shows that for approximately 60% of days, the Trust bed state was Red, with some days at Black and fewer Amber and Green days when compared to October 2018.

Capacity increases and change of ownership of existing bed stock are planned for November 2019 to support the Trust during an expected difficult winter period.

On the day cancellations for non-clinical reasons are shown below for Divisions A & D.
The chart shows estimated clinical income in October 2019. Non-elective inpatient activity was above planned levels and a provision has been taken against the impact of the blended payment system for emergency care. Elective inpatient income was above planned levels in the month also.

Outpatient activity was above planned levels in the month.

Pass-through drug and device income, within exclusions, was slightly lower than planned levels although this is offset by reduced expenditure.

The Trust continues to provide for commissioner challenges and CQUIN failure which will be resolved as data and reports become available.
Clinical Income

2019/20 Finance Report - Month 7

Elective spells
In month +140 activity, £98,886
YTD -1,888 activity, £1,167,073

Non elective spells
In month +410 activity, £1,714,647
YTD +1,806 activity, £10,799,768

Outpatients
In month 37 activity, £55,937
YTD +3,625 activity, £1,469,858

A&E
In month +108 activity, £23,941
YTD +99 activity, £487,982

Note: A&E includes impact of Children’s ED pathway change from M7
Total pay expenditure in October 2019 was £42.3m, £0.2m more than that spent in September 2019. The average for 2019/20 is £42.2m after adjusting for one-offs.

The £0.2m increase is entirely on substantive pay and relates to the full month impact of the NQNs who should all be in the nursing numbers from November 2019 with the exception of the theatre NQNs.

In terms of position vs Plan in the month was £0.6m (normalised) adverse which is £0.1m higher than in September 2019.

Recruitment Control Panel (RCP) is still meeting weekly to validate new and replacement posts.
WTE information presented focuses on total medical and nursing registered and unregistered.

The information compares plan vs worked and contracted.

Highlights:
1) Plan for both medical & nursing is flat
2) Nursing vacancies (Plan less contracted) suggest to be approximately 500.
3) Overall medics are on Plan in terms of contracted numbers although recognise this masks position on junior doctors vs consultants.
4) Nursing numbers expected to rise from November for NQNs, overseas recruitment and increase in staff linked to the Winter Plan.
Overall agency spend in October 2019 was £0.6m.

Expenditure on Thornbury increased by £15k in October 2019 at £72k, however, this is £103k lower than October 2018.

Expenditure on bank staff was £2.1m in October 2019, the same as September 2019.

In overall terms, expenditure on flexible staffing was £0.3m lower than Plan in October 2019.

In the last 3 weeks requests for flexible staffing has risen mainly in critical care areas.
CIP delivery in October 2019 was £4m against a Plan of £3.7m.

Income CIP scheme award continues to be high due to strong income performance with £1.9m being awarded in M7 (£0.5m backdated).

Year to date the Trust is £2.1m behind Plan for 2019/20 although monthly delivery is tracking higher than that previously delivered.

Fortnightly CIP run rate meetings will still focus on the income & expenditure position of each Division vs Plan, and also CIP performance at Care Group level.

Going forward Care Groups continue to be asked to highlight risks and any mitigations to discuss at the CIP meetings with Execs to firm up the delivery for 2019/20.
The Trust has identified CIP of £40.1m vs £40m target. Identification increased by £0.2m from September 2019.

Of the total identified, £28.4m/71% is planned to be recurrent and £11.7m/29% non-recurrent. When include full year effect of the 2019/20 CIP programme of £6.2m, the recurrent total is £34.6m.

Focus in the next 4 weeks is on:
- Ensuring delivery of identified schemes to avoid any slippage
- Reviewing non-recurrent schemes for opportunities to make recurrent
- Continuing to discuss risks and mitigations of any identified schemes.
- Identification of schemes for 2020/21.

This table outlines the main themes of identified CIP to date. Length of stay schemes will either result in expenditure reductions through closing beds or increases in income from utilising spare beds.
The cash balance was £80m at the end of October 2019, £33.5m above Plan. This is primarily due to:

1) Working capital position better than plan by circa £10m. The Accounts Receivable position is better than Plan due to improvements in negotiated payment arrangements with Commissioners. The Accounts Payable balance remains higher than anticipated due to delays in invoice payment, although overdue invoices continue to reduce.

2) The Operating I&E position continues to track above Plan (circa £3m), plus Year-end cash position from 18/19 finishing above the level assumed at the point the Plan was set (circa £3m).

3) Receipt of PSF bonuses for 18/19 £9.5m in excess of the level assumed in the Plan.

4) Net spend on property, plant and equipment (through capital expenditure and lease interest and principal payments) £1.9m less than Plan.

We will review the latest cash forecast by the end of Q3 to inform our 2020/21 plan and capital prioritisation process.
Net capital spend of £2.7m in month was £1m below planned levels. This was driven mainly by downward adjustment of £0.3m when valuing works relating to the new E level theatre (still being validated) in addition to underspends in strategic maintenance, divisional equipment and other projects. These are all more ad hoc in nature and subject to greater month on month volatility. Several other projects were also behind plan however this is mainly due to interim timings rather than slippage risks with regards to total project completion such as GICU. Some schemes financed from external funding have however been delayed such as energy efficiency and GDE funded IT projects. These are forecast to gain traction in Q3/Q4.

The forecast of £44.7m for capital projects excluding leases is within the bounds reported to the strategy and finance committee; however this may reduce slightly as a review of spend for E level theatre is underway and it is thought the £4.3m forecast may contain overlap with other areas of reported spend. At the same time, the Trust continues to be asked to bid for late external funding from potential national under-spend, which may increase the forecast.

Net capital spend of £2.7m in month was £1m below planned levels. This was driven mainly by downward adjustment of £0.3m when valuing works relating to the new E level theatre (still being validated) in addition to underspends in strategic maintenance, divisional equipment and other projects. These are all more ad hoc in nature and subject to greater month on month volatility. Several other projects were also behind plan however this is mainly due to interim timings rather than slippage risks with regards to total project completion such as GICU. Some schemes financed from external funding have however been delayed such as energy efficiency and GDE funded IT projects. These are forecast to gain traction in Q3/Q4.
Payables balances have stabilised since year-end.

The back-log of outstanding payments continues to be addressed. The number of unpaid invoices continues to reduce but remains a critical issue to resolve for the accounts payable team. The reduction has slowed due to temporary staff turnover.

Purpose and recommendation

The paper is presented for APPROVAL.

The Seven Day Hospital services (7DS) Programme was developed to support providers of acute services to deliver high quality care and improve outcomes on a seven-day basis for patients admitted to hospital in an emergency.

Ten 7DS clinical standards were originally developed and since 2015 Trusts have been asked to report on four priority standards:
- Clinical Standard 2: consultant-directed assessment
- Clinical Standard 5: diagnostics
- Clinical Standard 6: interventions
- Clinical Standard 8: ongoing review

The attached template shows UHS responses to the self assessment and is submitted to Trust Board for approval prior to completing the return.

Relevant strategic goals

|------------------------------------|-----------------------------------------------|---------------------------------|

Assurance framework links

- BAF01 – Inability to develop partnerships and redesign services innovatively renders the Trust unable to meet the expectations of the NHS long term plan, our strategic plan, and sustainable elective and non-elective pathways
- BAF02 – Failure to deliver regulatory requirements causes the Trust to breach the terms of its Provider Licence leading to a loss of local leadership due to an enforced change in Board and Executive composition, impacting on Goals 1 to 6

Impact assessments

<tbody>
<tr>
<td><strong>Clinical Standard 2:</strong> All emergency admissions must be seen and have a thorough clinical assessment by a suitable consultant as soon as possible but at the latest within 14 hours from the time of admission to hospital.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The Trust is meeting this standard: Evidence Source 1 - Consultant Job Plan All emergency specialties have consultant on call rotas with either planned ward round review to support the standard or continuous review throughout the shifts. The timing of review is entered through the electronic system, which enables monitoring, however often consultants enter a time at the end of the session rather than the time the patient is reviewed. Despite this we still meet the standard. Evidence Source 2 - Local Clinical Audit In November 2019 UHS carried out a local audit of 2,881 emergency admissions which attended the Acute Medical Unit between March to June 2019, covering 7 days a week. The audit objective was to identify the number of emergency admissions which received a clinical assessment by a suitable consultant as soon as possible, but at the latest within 14 hours from the time of admission to hospital. The Trust found that the time to first was achieved at 95.52%. 4.48% of the sample was uncompliant as the system data showed clinical assessments taking place on the admitting ward prior to the patient being admitted to the ward on the system. On average patients waited 3hrs 17mins for an assessment. 3hrs 41mins on a weekday and 2hrs 20mins at the weekend. UHS feels that this demonstrates the effective working practices demonstrated by the emergency admissions team. Evidence Source 3 - Wider performance and experience measures The Trust triangulates data to reinforce that the care provided to our emergency admissions is excellent. UHS is particularly proud of the changes which have been made to ensure that there is no difference between mortality at the weekend compared to weekdays. UHS have taken positive steps to ensure that length of stay is not significantly affected by weekends. Weekend discharges consistently make up 20% of the total weekly discharges and this is supported by SAFER principles.</td>
<td>Yes, the standard is met for over 80% of patients admitted in an emergency</td>
<td>Yes, the standard is met for over 80% of patients admitted in an emergency</td>
<td>Standard Met</td>
<td></td>
</tr>
</tbody>
</table>
### Clinical Standard 5:

Hospital inpatients must have scheduled seven-day access to diagnostic services, typically ultrasound, computerised tomography (CT), magnetic resonance imaging (MRI), echocardiography, endoscopy, and microbiology. Consultant-directed diagnostic tests and completed reporting will be available seven days a week:
- Within 1 hour for critical patients
- Within 12 hour for urgent patients
- Within 24 hour for non-urgent patients

<table>

<td>Yes available on site</td>
<td></td>
</tr>
</tbody>
</table>

The Trust is meeting this standard:
UHS consistently achieve Clinical Standard 5 target across seven days a week, all specialties provide consultant cover and interventions 7 days a week. We provide many of these services for neighbouring Trust’s. (IR, MRI, Interventional Endoscopy, Emergency Surgery, PCI and complex Cardio Arrhythmia)

### Clinical Standard 6:

Hospital inpatients must have timely 24-hour access, seven days a week, to key consultant-directed interventions that meet the relevant specialty guidelines, either on-site or through formally agreed networked arrangements with clear written protocols.

<table>

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Clinical Standard 8: All patients with high dependency needs should be seen and reviewed by a consultant TWICE DAILY (including all acutely ill patients directly transferred and others who deteriorate). Once a clear pathway of care has been established, patients should be reviewed by a consultant at least ONCE EVERY 24 HOURS, seven days a week, unless it has been determined that this would not affect the patient’s care pathway.

The Trust is meeting this standard:

**Evidence Source 1 - Consultant Job Plans**
Consultant led handover takes place twice a day in GICU (General Intensive Care Unit) and once a day in SHDU (Surgical High Dependency Unit). Job plans are appropriate and sufficient.

**Evidence Source 2 - Systems to support ongoing review**
UHS support and have implemented NEWS2 across all adult areas (excluding obstetrics). Patient acuity and needs are updated daily on Drs Worklist. This provides detail on handover and to the on call team. Patients over are stratifying or requiring urgent review are seen by the duty team as highlighted through NEWS2 (or by nursing team).

**Evidence Source 3 - Local Clinical Audit**
Twice daily consultant reviews take place in admission areas and high care areas and once daily review in other inpatient wards. The Trust has doubled consultant ward rounds over the past two years and consistently achieves this target.

**Evidence Source 4 - Wider performance and experience measures**
The Trust triangulates data to reinforce that the care provided to our high dependency patients is excellent. Outcomes are consistently within the top 10% noticeably.

**Additional assurance statement**
Each unit has a main daily consultant led ward round that is documented in the MetaVision. That documentation may be by a trainee.

In addition to this patients are generally reviewed in the form of a handover or business ward rounds. These are not necessarily documented in MetaVision, nor do we simply ‘tick box’ that they have occurred. If there are key elements of a review or plan that need to be documented then this will happen.

If patients are reviewed by the consultant in ED, that will not generally be recorded in MetaVision.

Neuro ICU
7:45 Consultant led bedside ward round review of all patients, not recorded in MetaVision.
11:30 Main ward round of all patients. Consultant led. This ward round is documented in the notes, but it may be a trainee documenting.
17:00 Handover ward round of all patients, away from the bedside, with two consultants.

SHDU
07:30 Consultant led bedside ward round review of all patients, not recorded in MetaVision.
11:30 Main ward round of all patients. Consultant led. This ward round is documented in the notes, but it may be a trainee documenting.
17:00 Handover ward round of all patients, away from the bedside, with two consultants.

RHDU
Morning consultant ward round of all patients. Always documented in MetaVision. May be a trainee documenting. Admitted patients will generally get a consultant review during daytime. This may occur in ED, in which case will not be documented in MetaVision.
**Self-Assessment of Performance against Clinical Standards 1, 3, 4, 7, 9 and 10**

**Clinical Standard 1 - Patient Experience**
The trust receives patient feedback through a wide variety of channels. For regular local feedback, such as the Friends & Family Test, results for weekend care can be filtered by date of discharge and free text comments are regularly subject to thematic reviews. Complaints are categorised and reported on thematically to identify emerging trends. All website feedback (NHS choices, Care Opinion) is monitored and shared with relevant teams. Healthwatch attends the trust’s patient experience committee and escalates any emergent concerns or themes.

Friends & Family Test results for weekend inpatient care show a lower recommend rate than the overall trust score: 93% average rating in Q3 and Q4 for inpatients patients discharged at weekends compared to 97% overall, and in outpatients weekend recommend rate was 92% compared to 96% overall. Performance in ED remained relatively consistent.

**Clinical Standard 3 - Multidisciplinary Team Review**
The Trust has processes in place to support MDT review in all specialties within emergency admissions, with the appropriate members to enable assessment for complex/ongoing needs to create an integrated management plan. We have a 7 day a week Frailty service at the front door.

In addition the clinical pharmacy service supports UHS 7 days a week, this includes medicine reconciliation and prescription review. At the weekend this service is reduced to identify patients who are higher priority for review (new admissions and high risk conditions or medicines). Areas with high emergency admission numbers i.e. AMU (Acute Medical Unit) and SDU (Surgical Day Unit), receive a dedicated clinical pharmacy service at the weekend. Since Feb-18 UHS has consistently achieved above the 80% medicines reconciliation rate target.

**Clinical Standard 4 - Shift Handovers**
All services have timetabled handover twice daily and 7 days a week. Outcomes are documented on Dr worklists in most specialties.

**Clinical Standard 7 - Mental Health**
The liaison psychiatry team at UHS in hours (mon-fri 9-5) for wards and 24/7 to the ED and AMU, would aim to respond to CRISIS referrals (e.g someone at imminent risk of harm to themselves or others/active suicidal intent) within 1 hour and URGENT (e.g self-harm, suicidal or psychotic but being safely managed within the ward/ area) referrals within the same day, and for non-urgent or routine referrals the response time is 3 days, however the service is significantly under resourced and at times meeting the demand is challenging. The Liaison Psychiatry service at UHS is not resourced or commissioned to provide urgent mental health response to the acute hospital wards out of hours any urgent advice is provided by the SHFT consultant on-call via the bleep holder based at Antelope House.

**Clinical Standard 9 - Transfer to Community, Primary and Social Care**
The UHS Complex Discharge Team offers a 6 day service (Sunday to Friday) at present, with significantly reduced service available on the Sunday. Where possible discharges are lined up for the weekend where partners offer a 7 day admitting service/start date. Due to system preparedness for 7 day working, it is not deemed financially viable to offer a full 7 day service at present.

Social care is available 7 days a week.

The UHS Integrated Discharge Bureau (IBD) have a process called ‘10 minutes for tomorrow’ in which they report directly to the Divisional Management teams on every patient who is highlighted for a weekend discharge, this process highlights delays and issues for example TTOs and discharge summaries.
The IBD team are also responsible for populating the SHREWD (Single Health & Resilience Early Warning Database) system. The system visibly shows pressure in real time across the whole health economy. The system is used as part of the Friday review to plan discharges for the weekend.

Currently the IBD team have 2.0 WTE In-reach Rehab Co-ordinators, the role of which is to line up weekend discharges for community beds. The team have recently approved the funding for 1.0 WTE additional co-ordinator to cover weekdays and support 7 day flow.

In addition the capacity of the reablement services at the weekend is reviewed on a case by case basis weekly, to ensure maximum utilisation of the services.

Some local community providers do not currently take patients at the weekends. As such UHS is working with these providers and putting measures in place to increase the number of patients which can be discharged at weekend.

**Clinical Standard 10 - Quality Improvement - HSMR, QI programme**

The Trust is a positive outlier for HSMR. Our weekend and weekday HSMR is comparable and significantly lower than expected compared to our peers locally and nationally.

We have a QI strategy with clear leadership and a program across the Trust. The QI team work with the clinical representatives and GIRFT team to ensure that our program focuses on outcomes as well as the Trust’s QI priorities.

Register of Seals, and Chair’s Actions

1. Signing and Sealing

There were no seals affixed since the last report.

2. Chair’s Actions

The Board has agreed that the Chair may undertake some actions on its behalf. The action at 2.1 below has been undertaken by the Chair.

2.1 Single Tender Action for Managed Bank and Collaborative Bank Service from NHS Professionals

Some time ago University Hospitals Southampton (UHS) Foundation Trust confirmed that it would like to agree a new Health Trust Education Europe (THE) Direct Award with NHS Professionals (NHS P). This is to be for a two plus (2+2) minimum period, that is, a 2 year contract plus 2 optional additional years. The contract value is £1,767,118 via a two year plus two optional additional years HealthTrust Europe (HTE) Direct Award.

A Contract Options paper was prepared by Procurement of which there were 4 options:

1. Extend the current contract by the 1 x 12 months on current terms to September 30th, 2020 and continue with the STP Collaborative/Migration during this time
2. Extend the current contract by the allotted 1 x 12 months on current terms to September 30th, 2020 and do not join the STP Collaborative until NHSP migrates all clients to Bank Staff in c. June 2020 (or the Trust tenders and procures an alternative provider).
3. Extend the current contract by the allotted 2 x 12 months on current terms to September 30th, 2021 and continue with the STP Collaborative/Migration during this time
4. Agree a new HTE Direct Award with NHS Professionals (2+2 minimum)

After looking at all the options Procurement agreed to adopt Option 4 for the following:

- Maintains current service and continued service improvement
- No early adopter/migration disengagement fee levied
- Reduction in Cloud Staff transaction fees via NHSP of £1.50 (qualified nursing) and £1 (unqualified nursing) per shift for the first 12 months from go live between NHSP Clients (non-NHSP client charge will be higher)
- Can commence the Gainshare opportunity and greater opportunity to succeed
- Contract value savings for a further Direct Award of c. £75k based on forecasted hours to September 2019. This saving has now increased to £101k after negotiations with NHS P resulted in their lowering their commission fees.

2.2 The new contract considers the mitigating factor of the Hampshire & Isle of Wight Sustainability & Transformation Partnership (STP) collaboration and any associated contract longevity to support migration to Allocate Bank Staff/Cloud Staff for proposed savings to be realised within the STP Bank share. This was approved by the Chair on 28 October 2019.

3. Recommendation

The Board is asked to ratify the Chair’s Action.
## Report to the Trust Board of Directors dated Thursday, 28 November 2019

### Purpose and recommendation

The paper is presented for INFORMATION.

Since 2014 IMEG and TMRG have been undertaking reviews of adult inpatient deaths. The higher observed number of avoidable deaths in Q1 2019/20 needs to continue to be monitored to see if it is part of a trend or simply a statistical cluster.

### Relevant strategic goals

| ☑ | ☐ | ☐ |

| ☐ | ☐ | ☐ |

### Assurance framework links

- BAF01 – Inability to develop partnerships and redesign services innovatively renders the Trust unable to meet the expectations of the NHS long term plan, our strategic plan, and sustainable elective and non-elective pathways.
- BAF02 – Failure to deliver regulatory requirements causes the Trust to breach the terms of its Provider Licence leading to a loss of local leadership due to an enforced change in Board and Executive composition, impacting on Goals 1 to 6.

### Impact assessments

Not specified

### Other standards affected

Not specified
1 Introduction
In March 2017 the DH published *National guidance on learning from deaths*. From April 2017, Trusts have been required to collect information on deaths, reviews, investigations and resulting quality improvements; and report to its public board meeting via a quarterly paper. This includes assigning an avoidability score to all those deaths reviewed. Whilst there is no requirement to review all deaths, rather only those where concerns are raised by relatives; unexpected deaths; deaths of patients with either a learning disability or a severe mental illness; or deaths in a specialty or treatment group where an alarm has been raised (for example, an elevated mortality rate), we have been undertaking a ‘hot review’ of all deaths via our Internal Medical Examiner Group (IMEG) process since September 2014. In April 2019 we adjusted our IMEG system to comply with the new national requirement for the medical examiners system.

2 Key Issues
- UHS introduced the Internal Medical Examiner Group (IMEG) in September 2014, prior to the national drive.
- The group examines all deaths, going beyond the national guidelines and has progressively increased the scope to include
  - All inpatient adult deaths
  - Death in the Emergency Department
  - A paediatric mortality review process.
- The review identifies potential avoidable factors as well as aspects of good care to feedback to the clinical teams.
- The bereavement care team attends IMEG and focuses support where the medical team discuss issues that might have been specifically stressful for the relatives. This allows a proactive approach to supporting those likely to have stress or conflict complicating their grief.
- In all cases Duty of Candour is discussed where appropriate ensuring that the clinical teams make early contact with the families.
- The proportion of avoidable features identified has reduced over the years and is believed to be a marker of improved care supported by the following observations
  - HSMR has fallen across all hospital sites.
  - The Trust Mortality Review Group is not identifying issues missed by IMEG and supports the findings.
  - The introduction of IMEG dramatically reduced the number of complaints with care concerns that were not previously identified. This volume has not increased.
  - Junior Dr feedback suggests that the process has changed their practice and it is likely that care is improving as a consequence of IMEG. We additionally share learning with the teams but when relevant to the hospitals through OWL. However the direct hot feedback to the medical team is possibly the most powerful influence.
- All deaths which are required to be reported to HM Coroner are now referred electronically.

Appendix 1 IMEG and mortality review process (Q1 – 2019/20)
Appendix 2 IMEG and mortality review process (Q2 – 2019/20)
Appendix 3 Paediatric mortality review process (CDAD) (Q1 – 2019/20)
Appendix 4 Paediatric mortality review process (CDAD) (Q2 – 2019/20)

3 Data Analysis
In the Second quarter of this year, 541 deaths were reviewed at IMEG. This is slightly up from last year’s Q2 but not a significant jump. All cases get assigned an initial avoidability rating and get adjusted if any changes are needed, however, all but 4 Urgent Case reviews, TMRG and M&M questions have been reviewed and avoidability scores have been update, showing 3 case, or 0.5% of the total number of deaths reviewed have been deemed as probably avoidable, 3 cases or 0.5
% are reported as having strong evidence of avoidability and no cases are deemed avoidable. The higher observed number of avoidable deaths in this quarter needs to continue to be monitored to see if it is part of a trend or simply a statistical cluster. The current severe clinical and financial pressures under which the trust is operating add to the necessity for the closely monitoring and seeing if this is an evolving trend.

On average the number of cases being sent to M&M meetings from Q1 has dropped, the cases being sent for TMRG review has slightly risen from last quarter. We have seen a significant increase of cases being sent for an urgent case review which again needs to be observed and to see if it is part of a trend or simply a statistical cluster.

Whilst there is no national requirement to report paediatric deaths at trust board level, it seems appropriate to demonstrate that we are providing a similar level of scrutiny for patients of all ages within the trust. We have therefore included details of the number of paediatric death reviews undertaken by the Child Death and Deterioration Group (CDAD).

All outstanding reviews for paediatric patients for Q1 2019/20 have been completed and the full details are set out below in appendix 3.

In the second quarter of the year 2019/20 there have been 7 paediatric deaths, none of these deaths have been deemed probably avoidable, strong evidence of avoidability nor definitely avoidable.

With both the rise in deaths in quarter 1 of the financial year 2019/20 compared with previous years, for both adult and paediatric cases, this can be seen as a natural rise in population and being a tertiary centre for many specialities we get the sickest patients and ultimately we will have a rise in mortality. Following trends from previous years, Q2 of the financial year 2019/20 we have seen a drop in overall deaths from the previous quarter, however this is still up to previous years. Saying this we can say that our HSMR is still below what is expected of us as a trust.

Limitation of this report a small number of cases remain outstanding for final grading as still within the SISG process. The Medical Examiners service is currently under staffed compared with the national expectation and recruitment to M.E and MEO posts is progressing slowly due to the delays in provision of funding for non-cremation deaths reviewed by the team which has made it impossible to provide the precise financial model to finalise our business case. The lack of a full complement of staff whilst providing a full service gives limited opportunity for data analysis and review of evolving trends.

4 Next Steps

Introduction of a non-statutory Medical Examiner Service within acute hospital Trusts began on 1st April 2019. A business case has been prepared for the Trust’s Medical Director setting out the requirements of delivering this service. The introduction of the new service has necessitated the Medical Examiner of the day spending greater time reviewing each case and, where applicable, completing cremation form 5. The income from this will be used to support the service. However, with this increased commitment, there has been a reduction in the number of Consultants able to undertake reviews and additional resource needs to be identified in order to ensure there is sufficient cover available every day and that this cover is sustainable. Over the next quarter we will aim to employ some administration support and look to streamline the service to improve on the turnover time and improve the quality of scrutiny for each case.

We will continue to work with partners. The process has been shared and adopted by Solent and we are looking at joint learning and will look to support and move investigations with other providers.
### IMEG and mortality review process (Q1 – 2019/20)

**Deaths in Scope (n= 606)**

- **No adverse event but potential learning**
- **Care appears to be below expectations**
- **No adverse event but potential learning**

**IMEG Review (n=606)**

- **No Care Concerns**
- **Potential serious adverse event / avoidable death**
- **Avoidability Rating 1, 2, or 3 (n=1)**
  - **Action: Root Cause Analysis and action plan**
- **Avoidability Rating 4, 5, or 6 (n=605)**
  - **Action: Feedback to clinicians, discussion at M&M**

**Awaiting CPM Results (n=0)**

**No Further Action (n=556)**

**Scoping Meeting (n=9)**

Avoidability Rating 1, 2 or 3 (n=0)

CDAD Review (n=7)

Avoidability Rating 4, 5 or 6 (n=7)

Decisions Outstanding (n=0)

Avoidability Rating

1. Definitely avoidable = 0
2. Strong evidence of avoidability = 0
3. Probably avoidably (more than 50:50) = 0
4. Possible avoidable, but not very likely (<50:50) = 2
5. Slight evidence of avoidability = 3
6. Definitely not avoidable = 2
# CRN Wessex 2019-20 Quarter 2 Performance Report

**Category:** Quality, Performance, and Finance  
**Agenda item:** 9.2  
**Sponsor:** Medical Director  
**Author:** Graham Halls, Business Intelligence Manager and Rebecca McKay, Chief Operating Officer  
**Provenance:** Q1 2019-20 report submitted at the UHS Board meeting on 26 September 2019  
**Classification:** This Report is unclassified.

## Purpose and recommendation
The paper is presented for INFORMATION.

**Summary:**
The report sets out the National Institute for Health Research Clinical Research Network Wessex (NIHR CRN Wessex) performance for the period 1 April 2019 to 30 September 2019 unless otherwise stated.

### Key achievements / issues:
- In Q1 & 2 2019/20 CRN Wessex was 28 percent below the recruitment target agreed with the NIHR and 38 percent below the same period on 2018/19. All LCRNs have experienced a fall in recruitment with an average reduction of 28 percent (chart 2b).
- Over 750 participants have been enrolled on to DeNDRoN managed studies, exceeding the NIHR target for Wessex in 2019/20
- 12 of the 30 specialties were ranked in the top five LCRNs for recruitment weighted for the local population

### Recommendation:
- Monitor activity and performance via quarterly progress reports and the agreed assurance framework in appendix 1

## Relevant strategic goals

<table>
<thead>
<tr>
<th>Goal 1</th>
<th>Goal 2</th>
<th>Goal 3</th>
</tr>
</thead>
</table>

## Assurance framework links
The CRN Wessex UHS board assurance framework is included in appendix one to this report. The performance of CRN Wessex partner organisations also impacts the following Board Assurance Framework entries:
- BAF01 – Inability to develop partnerships and redesign services innovatively renders the Trust unable to meet the expectations of the NHS long term plan, our strategic plan, and sustainable elective and non-elective pathways
**Impact assessments**

What impact have you assessed through conducting an impact assessment, if applicable (e.g. equality, quality, finance, Data Protection, etc.)

This may not be “n/a” or “none”

**Other standards affected**

CQC Well-led Framework (for research)

---

1. **Introduction or Background**

1.1 University Hospital Southampton NHS Foundation Trust (UHS) hold a contract with the Department of Health and Social Care to host the local clinical research network – CRN Wessex. The purpose of CRN Wessex is to provide an efficient and effective support to the partner organisations for the initiation and delivery of funded research in the NHS. Some of the research is funded by the National Institute for Health Research (NIHR), but most is funded by NHS non-commercial partners and industry. This activity makes an important contribution to improve the health of the population and to support economic growth.

1.2 CRN Wessex aims to:

1.2.1 Promote equality of access, ensuring that wherever possible, patients have parity of opportunity to participate in research

1.2.2 Improve the quality, speed and co-ordination of clinical research by removing the barriers to research in the NHS

1.2.3 Streamline and performance manage NHS support for eligible studies to ensure the NHS service support costs of these studies are met in a timely and efficient manner.

2. **Analysis and Discussion**

2.1 Local Clinical Research Network (LCRN) performance is primarily measured on the number of research participants enrolled on to NIHR portfolio research projects within each region. Research recruitment represents opportunities for the population to take part in research that the NIHR considers high quality. Research can also be a source of funding for participating organisations and the wider NHS.

2.2 Chart one provides a summary of CRN Wessex’s current performance against the NIHR’s CRN high level objectives for the 2019/20 financial year (quarters 1-2).

2.3 Recruitment within Wessex was 28 percent below the year to date target agreed with the NIHR (chart 2a). When compared to the same period last year recruitment has dropped by 38 percent. It should however be recognised that 2018/19 was CRN Wessex’s most successful year. If performance in the first two quarters were to continue predicted year end recruitment would be 31,512, 28 percent below the annual target for high level objective 1a.

2.4 Recruitment on to commercially sponsored and funded studies was 46 percent below the year to date target (chart one) and therefore Wessex was not meeting high level objective 1b.

2.5 All LCRNs have experienced a fall in recruitment with an average fall of 28 percent (chart 2b). A clear reason has not been identified for this however the NIHR coordinating centre are investigating reductions in both the number of studies entering the portfolio and a general trend downwards in study sample size.

Chart 2b: Recruitment by local clinical research network – 2019/20 Q1-2
2.6 Recruitment to time and to target on commercial funded and sponsored study sites (those that closed in quarter one & two) was below the national target, which is for 80 percent of sites to achieve the measure. This objective along with high level objectives 1a and 2b directly affect the network’s future funding, with 15 percent of the model dependent on both the performance and volume of studies meeting these objectives.

2.7 CRN Wessex sites were meeting the median study set-up time targets set by the NIHR (HLO 9). These targets represent a five percent reduction on the national median set-up times for commercial and non-commercial studies in 2018/19. The non-commercial target has recently reduced from 62 to 60 days and as a result CRN Wessex are at risk of exceeding it, with a current median setup time of 58 days.

2.8 The performance of CRN Wessex partner organisations against their year to date recruitment goals is shown in chart three. The performance is red / amber / green rated depending on whether the organisation is achieving their goal (green), within 20% (amber) or not currently meeting the goal (red). All but two organisations are not meeting their goal, and this is in line with the network’s collective performance.

![Chart 3: Recruitment by partner organisation in Wessex against target - 2019/20 Q1-2](image)

IC = Independent Contractors refers to, but is not exclusive to; GP Surgeries, pharmacies, private healthcare providers.

2.9 Of the six NIHR clinical research network divisions (see glossary for further information) three were either above or within 20 percent of their year to date recruitment target (chart four).
2.10 CRN Wessex recruitment performance is benchmarked against the other LCRNs on a range of measures. Charts 5a-c show the network’s rank for unweighted, population weighted and complexity weighted recruitment. CRN Wessex normally ranks in the top ten LCRNs, indicating the network’s partner organisations reach more of the local population with research opportunities that may have a positive impact on their care. The glossary contains further information on complexity weighting.

**Chart 4: Recruitment by NIHR Division in Wessex against target - 2019/20 Q1-2**

**Chart 5a: Comparison of recruitment by LCRN - 2019/20 Q1-2**
Chart 5b: Comparison of recruitment by LCRN weighted for local population - 2019/20 Q1-2

Chart 5c: Comparison of recruitment weighted by complexity by LCRN - 2019/20 Q1-2
2.11 Eight specialties are ranked in the top five for recruitment when compared to the 14 other LCRNs (chart six). This increases to 12 when the size of the population in each region is considered and 11 for complexity weighted recruitment.

**Chart 6: Comparison of Wessex unweighted, population and complexity weighted recruitment LCRN rank by specialty - 2019/20 Q1-2. Red: position 11-15, amber: 6-10 and green 1-5.**
2.12 67 percent of sites in CRN Wessex closed having recruited to target and within their allocated time on commercial studies (chart seven). This will continue to be monitored closely in 2019/20 using a recently updated commercial section of the CRN Wessex open data platform and reported back to the executive and partnership groups.

3. Conclusion

3.1 The shortfall in recruitment represents a financial risk to CRN Wessex. 20 percent of the NIHR funding model (informing the allocation for 2021/22) is reliant on strong performance for high level objectives 1, 2a, 2b, along with the NIHR’s harmonised specialty objectives. Actions taken by CRN Wessex as a result are detailed in section four.

3.2 The UHS Board will be updated on progress in 2019/20 with quarterly performance reports and issues escalated via the assurance framework in appendix 2.

4. Recommendation

4.1 In September all partner organisations received a letter from CRN Wessex detailing the network’s gap in recruitment against the NIHR target. Within the letter there were recommended studies to consider opening, or if already active to allocate resources to them. CRN Wessex partner organisations have asked to consider prioritising this list, as well as any locally led projects the network are not yet aware of.

4.2 In November the CRN Wessex partnership group, which consists of board-level representatives from partner organisations, agreed to adopt an incentivisation model intended to improve performance on the aforementioned high level objectives. Funding in 2020/21 to partner organisations will in part reflect their success against high level objectives 1, 2a and 2b.
4.3 Monitor activity and performance via quarterly progress reports and the agreed assurance framework in appendix 1

5. Appendices

1:1 meetings
CRN Wessex chief operating officer meets with host executive with responsibility for host contract quarterly.

Executive group meetings
CRN Wessex executive group meets monthly.

Partnership group meeting
CRN Wessex group meets three times a year in April, October and January.

Performance report
CRN Wessex provides a quarterly performance report to the host board.

Finance report
CRN Wessex provides as quarterly finance report to the host assistant director of finance.

Annual report
CRN Wessex collaborates with partner organisations to collate an annual report that is submitted to the host for approval and then the NIHR CRN CC.

Patient survey report
The network conducts an annual survey of patients participating in research. The survey engages with and asks patients about their experiences of taking part in clinical research provides research professionals with a wealth of information which helps to shape how research is designed, conducted and delivered.

Internal finance audit
Every three years, with the most recent audit in December 2018.

¹ All governance groups have been convened in accordance with the NIHR CRN CC Performance and operating framework with terms of reference
² All reports are submitted using agreed standard templates
**Benchmarking**
CRN Wessex has an open data platform that provides real time benchmarking data. These data are reported to the executive group, partnership group and host board.

**Review**
CRN Wessex has a review meeting every six months with NIHR CRNCC attended by clinical director, chief operating officer, executive from host with responsibility for the contract and partnership group chair.

**Risk register**
The register forms part of the host's register and is reviewed every six months.

**Business planning**
Formal 1:1 business review and planning meeting with partner organisations annually. Ongoing informal performance reviews with members of the CRN Wessex Operational Management Group.

5.2 Appendix 2 – Glossary

Ratios used for weighting complexity of recruitment (non-commercial recruitment only):

- Band 1 - Large Scale interventional or observation studies with a >10,000 participant target (1:1)
- Band 2 - Observational design (1:3.5)
- Band 3 - Interventional design studies (1:11)

Partner organisation abbreviations used by CRN Wessex:

- DCHFT – Dorset County Hospital NHS Foundation Trust
- DHUFT - Dorset Healthcare University NHS Foundation Trust
- HHFT - Hampshire Hospitals NHS Foundation Trust
- IOW - Isle of Wight NHS Trust
- IC – Independent contractors, including but not limited to primary care and non-NHS organisations
- PHFT - Poole Hospital NHS Foundation Trust
- PHT - Portsmouth Hospitals NHS Trust
- SFT - Salisbury NHS Foundation Trust
- Solent – Solent NHS Trust
- SCAS - South Central Ambulance Service NHS Foundation Trust
- SHFT - Southern Health NHS Foundation Trust
- RBCH - The Royal Bournemouth And Christchurch Hospitals NHS Foundation Trust
- UHS - University Hospital Southampton NHS Foundation Trust
