

## Patient information factsheet

# After drainage of a cerebral abscess

We've given you this factsheet because you have recently had surgery at Wessex Neurological Centre. It contains useful information and advice that you need to follow once you return home.

Your consultant is:.....

### Wound care

Keep your wound(s) clean and dry. You do not need to have a dressing over it unless you are told otherwise by a healthcare professional.

You can have a bath or shower, but you will need to keep your wound(s) dry until your sutures or clips are removed. You can wash your hair with a mild shampoo once any clips or sutures are removed.

You may also experience some numbness and tingling around the wound(s). This is normal and may last a few months.

Check your wound(s) daily for any signs of infection, such as:

- any leakage from the wound(s)
- increased redness or swelling
- any increasing pain around the wound(s) site

If you experience any of these symptoms, or if you have a high temperature or any other concerns, please contact the ward.

### Clips and sutures

Clips or sutures are usually removed in hospital or at your GP's surgery five to ten days (sometimes longer) after surgery. Some people may be able to go home before their clips are removed. In this case, we will give you a letter and explain when you will need to make an appointment with your GP to have the clips removed.

You may also have Steristrips over your wound. These will peel away with time or can be removed with the clips or sutures.

### Medication

When you leave hospital, we will give you a supply of medication to take with you. You will need to arrange any repeat prescriptions through your GP.

You must complete your prescribed course of antibiotics, which will usually continue for some weeks.

Please continue to take your pain relief once you are home as you may continue to experience headaches for a while after the surgery. If you are taking any medication, do not stop taking it unless advised by your doctor.

There is sometimes a wait for medicines to arrive from the hospital pharmacy. We will try to ensure this

# Patient information factsheet

delay is as short as possible for you.

## Alcohol

Check the labels on your medicines for advice on whether you should avoid alcohol.

## Driving

You must inform the DVLA and your insurance company about your surgery as there will be restrictions on your driving as a result of your surgery. You must not drive until authorised to do so by the DVLA.

## Work

The timing of your return to work depends mainly on how you feel and what you do for a living. It is not unusual to be off work for six to eight weeks, but you may wish to wait until you have had your follow-up appointment.

## Symptoms to look out for

Contact your ward on the telephone number at the end of the factsheet if you experience:

- worsening headache
- drowsiness
- fits or blackouts (if you haven't experienced these in the past)
- neck stiffness or pain
- vomiting
- a high temperature or fever
- any new weakness in your arms or legs
- speech problems

## Anti-embolism stockings

When you leave hospital, you will keep wearing your white anti-embolism stockings both day and night for at least two weeks and until you have returned to the level of mobility that is usual for you. You should check your skin daily. The stockings should not be removed for longer than 30 minutes.

It is important that the stockings are removed and reapplied correctly on a daily basis. If you are unable to do this it may be safer not to go home with stockings.

## Leaving hospital

During your stay the nursing staff and other healthcare professionals will start to plan your discharge (when you leave hospital) with you. Your surgical team will decide when it is safe for you to leave hospital.

A member of the therapy team may also assess you. Our multidisciplinary team may need to discuss any specific arrangements you need.

On the day of your discharge you will need to arrange for someone to collect you from the ward at a time advised by your nurse. We recommend that you arrange for someone to be at home with you when you are discharged from hospital.
